Re-submission of Exhibits A and B to Amended and Restated Power Purchase Agreement

In Will-Power UT, LLC's ("Will-Power") initial application for approval of a closed private generation contract, the provided Power Purchase Agreement ("PPA"), subject to highly confidential treatment under R746-1-602, included Exhibits A and B providing the [REDACTED], respectively. The Public Service Commission (the "Commission") noted in a request for additional information that neither of these exhibits were legible. As such, Will-Power hereby resubmits the schematics found within Exhibits A and B to the PPA in the order they appeared in the original. Will-Power respectfully requests highly confidential treatment under R746-1-602 of these schematics.

Additionally, Will-Power wishes to emphasize that the Aquila Power Station was designed, and is being constructed specifically for the Large Load Customer's contracted load as contemplated in the PPA for which Will-Power now seeks the Commission's approval. The Aquila Power Station maintains sufficient generation capacity to serve all contracted load.
