Subject: Please Adopt the Conservation Enabling Tariff

Mr. Campbell. As a citizen of Utah I writing to register my support for the proposed Conservation Enabling Tariff that is now before the Public Service Commission. Utah should take a step in the right direction and join the many states addressing utility rate-setting policies that discourage utilities from promoting energy conservation.

The proposed Conservation Enabling Tariff is a "win-win-win" proposal that is consistent with Governor Huntsman's recent;y announced comprehensive energy efficiency policy for Utah. Under the proposal, the environment benefits from wise resource management, the public benefits from a healthier environment and better air quality, consumers benefit as falling demnd helps lower energy prices, and state and local econmies benefit from a healthier environment and ower prices.

I urge you to support the proposed Conservation Enabling Tariff and to encourage Questar Gas Company to quickly introduce and expand programs that promote energy efficiency.

Sincerely,

Greg Libecci

Richard M Campbell, Chair of Public Service Commission:

To me it is self-evident that in our present circumstances of diminishing non-renewable energy resources we should make the most of what we do have, i.e, increase the efficiency with which we utilize these resources by all means possible.

The Public Service Commission will start hearings on a proposal known as "Conservation-Enabling Tariff or CET", aimed at improving the efficiency of buildings and equipment throughout Utah. CET removes a disincentive that discourages Questar Gas from creating energy-conservation measures. Passage of CET will help promote efficiency of gas utilization.
Sounds to me like a good measure.

Sincerely,
Naomi Franklin

RE: Conservation Enabling Tariff

Dear Mr Campbell,

I am writing today to express the Sierra Club Utah Chapter's support of the proposed Conservation Enabling Tariff that is being considered to help Questar Gas implement more efficiency programs for its customers.

We think the CET is a good idea and one that will provide lasting savings to Utah consumers while helping to lesson our natural gas demand.

Part of the Sierra Club's overall energy policy to see reductions in our fossil fuel consumption in order to help address the looming threat of global warming and climate change. While natural gas is far less polluting than many other types of fossil fuels, the extraction, transportation, and use of natural gas still incurs significant overall impacts to our environment, including the emission of greenhouse gases into our atmosphere.

We believe that Questar, as one of Utah's major regulated utilities, has a responsibility to do all that it can to lesson the environmental impacts from its operations. As we understand it, the CET will enable Questar to make such necessary changes in its operations, thereby helping consumers and businesses reduce their gas demand through such efficiency programs.

Lastly, this program will also help the state in meeting its energy efficiency goal established by Governor Huntsman earlier this year.

Thank you for your consideration.

Respectfully,

Tim Wagner, Director
Utah Smart Energy Campaign
Utah Chapter Sierra Club

Dear Richard Campbell,

I'm writing to register my support for the proposed Conservation Enabling Tariff that is now before the Public Service Commission. Utah should take a step in the right direction and join the many states addressing utility rate-setting policies that discourage utilities from promoting energy conservation. The proposed Conservation Enabling Tariff is an excellent proposal that is consistent with Governor Huntsman's recently announced comprehensive energy efficiency policy for Utah. Under the proposal, the environment benefits from wise resource management, the public benefits from a healthier environment and better air quality, consumers benefit as falling demand helps lower energy prices, and state and local economies benefit from a healthier environment and lower prices.

We need to think about a future in which citizens are encouraged to SAVE energy, rather than wasting it. These immediate, substantial and tangible benefits far outweigh the Committee of Consumer Services' concern that the utility may benefit from greater assurance that its revenues will cover its costs if energy use declines.

Please support the proposed Conservation Enabling Tariff and encourage Questar Gas Company to quickly introduce and expand programs that promote energy efficiency. We are entering a new period in which careful monitoring of our individual energy needs should be supported by policies which reward citizens for thrift.

Best Regards,

Susan F. Fleming
