Governor Jon Huntsman, Jr.
Utah State Capitol Complex
East Office Building, Suite E220
P.O. Box 142220
Salt Lake City, UT 84114-2220

Dear Governor Huntsman,

I'm writing to register my support for the proposed Conservation Enabling Tariff that is now before the Public Service Commission. Utah should take a step in the right direction and join the many states addressing utility rate-setting policies that discourage utilities from promoting energy conservation.

The proposed Conservation Enabling Tariff is a "win-win-win" proposal that is consistent with Governor Huntsman's recently announced comprehensive energy efficiency policy for Utah. Under the proposal, the environment benefits from wise resource management, the public benefits from a healthier environment and better air quality, consumers benefit as falling demand helps lower energy prices, and state and local economies benefit from a healthier environment and lower prices.

These immediate, substantial and tangible benefits far outweigh the Committee of Consumer Services' concern that the utility may benefit from greater assurance that its revenues will cover its costs if energy use declines.

I urge you to support the proposed Conservation Enabling Tariff and to encourage Questar Gas Company to quickly introduce and expand programs that promote energy efficiency.

Sincerely,

Mary Ann Hess

I'm writing to register my support for the proposed Conservation Enabling Tariff that is now before the Public Service Commission. Utah should take a step in the right direction and join the many states addressing utility rate-setting policies that discourage utilities from promoting energy conservation.

The proposed Conservation Enabling Tariff is a "win-win-win" proposal that is consistent with Governor Huntsman's recently announced comprehensive energy efficiency policy for Utah. Under the proposal, the environment benefits from wise resource management, the public benefits from a healthier environment and better air quality, consumers benefit as falling demand helps lower energy prices, and state and local economies benefit from a healthier environment and lower prices.

These immediate, substantial and tangible benefits far outweigh the Committee of Consumer Services' concern that the utility may benefit from greater assurance that its revenues will cover its costs if energy use declines.

I urge you to support the proposed Conservation Enabling Tariff and to encourage Questar Gas Company to quickly introduce and expand programs that promote energy efficiency.

Sincerely,

Kim Tietje

Dear Governor Huntsman,

I'm writing to register my support for the proposed Conservation Enabling Tariff that is now before the Public Service Commission. Utah should take a step in the right direction and join the many states addressing utility rate-setting policies that discourage utilities from promoting energy conservation. The proposed Conservation Enabling Tariff is an excellent proposal that is consistent with your recently announced comprehensive energy efficiency policy for Utah. Under the proposal, the environment benefits from wise resource management, the public benefits from a healthier environment and better air quality, consumers benefit as falling demand helps lower energy prices, and state and local economies benefit from a healthier environment and lower prices.

We need to think about a future in which citizens are encouraged to SAVE energy, rather than wasting it. These immediate, substantial and tangible benefits far outweigh the Committee of Consumer Services' concern that the utility may benefit from greater assurance that its revenues will cover its costs if energy use declines.

Please support the proposed Conservation Enabling Tariff and encourage Questar Gas Company to quickly introduce and expand programs that promote energy efficiency. We are entering a new period in which careful monitoring of our individual energy needs should be supported by policies which reward citizens for thrift.

Best Regards,

Susan F. Fleming

Dear Governor Jon Huntsman, Jr.,

I am writing in support of the upcoming Energy Conservation proposal that would allow Energy Companies such as Questar to provide tarriff rates that would encourage energy conservation while still allowing businesses to make money. This is an important step in reaching a society that meets a triple bottom line: economic, social and environmental. Everyone wins with this type of initiative and this type of thinking. I do hope you will support it as well.

Cordially,

Jamie McEvoy

Governor Huntsman and others,

I support the Conservation-enabling Tariff pilot program being considered by the Public Service Commission.

Others are reminding you, I'm sure, of the advantages and benefits of this program.

Increasing demand for energy results in environmental and social impacts that are of particular consequence to me. Strategies that answer increased demand with increased efficiency are essential.

Sincerely,
Robert Bayn

Governor Jon Huntsman, Jr.:

To me it is self-evident that in our present circumstances of diminishing non-renewable energy resources we should make the most of what we do have, i.e, increase the efficiency with which we utilize these resources by all means possible.

The Public Service Commission will start hearings on a proposal known as "Conservation-Enabling Tariff or CET", aimed at improving the efficiency of buildings and equipment throughout Utah. CET removes a disincentive that discourages Questar Gas from creating energy-conservation measures. Passage of CET will help promote efficiency of gas utilization.
Sounds to me like a good measure.

Sincerely,
Naomi Franklin

Dear Governor Huntsman,

Please strongly support the proposed Conservation Enabling Tariff that is now before the Public Service Commission

As a Utah resident, I believe that Utah should take this important step in the right direction. We need to join the many states working to correct utility rate-setting policies that currently discourage utilities from promoting energy conservation.

The proposed Conservation Enabling Tariff is a "win-win-win" proposal that is consistent with Governor Huntsman's recently announced comprehensive energy efficiency policy for Utah. Under the proposal, the environment benefits from wise resource management, the public benefits from a healthier environment and better air quality, consumers benefit as falling demand helps lower energy prices, and state and local economies benefit from a healthier environment and lower prices.

These immediate, substantial and tangible benefits far outweigh the Committee of Consumer Services' concern that the utility may benefit from greater assurance that its revenues will cover its costs if energy use declines.

Again, please support the proposed Conservation Enabling Tariff and encourage Questar Gas Company to quickly introduce and expand programs that promote energy efficiency.

Thank you very much for your consideration.

Sincerely,
