See others

Dear Mr. Campbell,

I'm writing to register my support for the proposed Conservation Enabling Tariff that is now before the Public Service Commission. Utah should take a step in the right direction and join the many states addressing utility rate-setting policies that discourage utilities from promoting energy conservation.

The proposed Conservation Enabling Tariff is a "win-win-win" proposal that is consistent with Governor Huntsman's recently announced comprehensive energy efficiency policy for Utah. Under the proposal, the environment benefits from wise resource management, the public benefits from a healthier environment and better air quality, consumers benefit as falling demand helps lower energy prices, and state and local economies benefit from a healthier environment and lower prices.

These immediate, substantial and tangible benefits far outweigh the Committee of Consumer Services' concern that the utility may benefit from greater assurance that its revenues will cover its costs if energy use declines.

I urge you to support the proposed Conservation Enabling Tariff and to encourage Questar Gas Company to quickly introduce and expand programs that promote energy efficiency.

Sincerely,

Sarah Schoenbach

Dear Mr. Campbell,

I'm writing to register my support for the proposed Conservation Enabling Tariff that is now before the Public Service Commission. Utah should take a step in the right direction and join the many states addressing utility rate-setting policies that discourage utilities from promoting energy conservation.

The proposed Conservation Enabling Tariff is a "win-win-win" proposal that is consistent with Governor Huntsman's recently announced comprehensive energy efficiency policy for Utah. Under the proposal, the environment benefits from wise resource management, the public benefits from a healthier environment and better air quality, consumers benefit as falling demand helps lower energy prices, and state and local economies benefit from a healthier environment and lower prices.

These immediate, substantial and tangible benefits far outweigh the Committee of Consumer Services' concern that the utility may benefit from greater assurance that its revenues will cover its costs if energy use declines.

I urge you to support the proposed Conservation Enabling Tariff and to encourage Questar Gas Company to quickly introduce and expand programs that promote energy efficiency.

Sincerely,

Kim Tietje

Salt Lake City, UT 84111

Dear Mr. Campbell,

Please strongly support the proposed Conservation Enabling Tariff that is now before the Public Service Commission.

As a Utah resident, I believe that Utah should take this important step in the right direction. We need to join the many states working to correct utility rate-setting policies that currently discourage utilities from promoting energy conservation.

The proposed Conservation Enabling Tariff is a "win-win-win" proposal that is consistent with Governor Huntsman's recently announced comprehensive energy efficiency policy for Utah. Under the proposal, the environment benefits from wise resource management, the public benefits from a healthier environment and better air quality, consumers benefit as falling demand helps lower energy prices, and state and local economies benefit from a healthier environment and lower prices.

These immediate, substantial and tangible benefits far outweigh the Committee of Consumer Services' concern that the utility may benefit from greater assurance that its revenues will cover its costs if energy use declines.

Again, please support the proposed Conservation Enabling Tariff and encourage Questar Gas Company to quickly introduce and expand programs that promote energy efficiency.

Thank you very much for your consideration.

Sincerely,

Richard Spotts
