RECEIVED

I wanted to Sincerely thank Questar and the Public Service Commission for the clean domestic alternative fuel network you provide for natural gas vehicle owners it is unbeatable in the nation for quality and price. My family followed Governor Huntsman's lead in switching to this clean and green UTAH fuel for our cars and to help ease our buget. I was spending over \$40 per week to get to work and after switching to natrual gas I only spend \$40 per month its a life saver, I dont know what I would do with out it. Thanks for offering the consumer a UTAH an alternative to imported petroleum. Please continue to invest in these stations! What a great P.R. campaign Questar could make if they would increase the infustructure for these vehicles and promote what they were doing to fight high transportation costs and to improve the air we breath?

I suggest that Questar petition the Public Service Commission in using the 50 cent per gallon federal excise tax credit to be used for refueling infrastructure needs as opposed to passing this on to the consumer. After all, that was the intent of Congress with this credit to begin with. I also suggest we consider a plan similar to California's AB118, where there is a \$3 per vehicle registration fee on all vehicles to assist in building out more alternative fuel stations. I hope that Questar will continue to invest in upgrading the stations and in building more where they are needed, I think that a station in the south end of Utah vally such as adding one at the Paysn Flying J would be a great resource.

Keep up the good work!

Jesse Meidinger
