PRE-FILED SURREBUTTAL TESTIMONY

OF

MARLIN BARROW

ON BEHALF OF THE

UTAH DIVISION OF PUBLIC UTILITIES

PHASE 2-COST OF SERVICE

October 7, 2008

1

2 **Q: Please state your name, business address, employer, and current position or**  
3 **title for the record.**

4 A: My name is Marlin Barrow, and my business address is 160 E 300 S, Salt Lake  
5 City, 84114. My employer is the Division of Public Utilities in the Utah  
6 Department of Commerce. My current position is a Technical Consultant.

7 **Q: Are you the same Marlin Barrow that submitted Direct Testimony and**  
8 **Rebuttal Testimony for the Division in this Docket No. 07-057-13?**

9 A: Yes.

10 **Q: What is the purpose of your surrebuttal testimony?**

11 A: My purpose is the following: (1) Address issues raised by Witness Roger J. Ball  
12 in his rebuttal testimony: (2) Clarify the Division position concerning some  
13 possibly confusing statements made by Committee of Consumer Services (CCS)  
14 Witness Dr. David Dismukes in his rebuttal testimony: and (3) Confirm the  
15 position of the Division regarding the Basic Service Fees (BSF) issues raised by  
16 Company Witness (Company) Steven R. Bateson's rebuttal testimony.

17 **Q: What were the issues Mr. Ball addressed in his rebuttal testimony that the**  
18 **Division wishes to address?**

19 A: The issues the Division wishes to address concern the objections Mr. Ball raised  
20 to the Division’s recommendations in Direct Testimony regarding the Extension  
21 Area Charges (EAC) and the GSS rate schedule.

22 **Q: What was Mr. Ball’s objection to the EAC issue?**

23 A: Mr. Ball objected to the recommendation of the Division to “refinance” the EAC  
24 payoff schedules at a 6% rate of interest.<sup>1</sup> Before addressing that issue directly I  
25 need to make a correction to my direct testimony, line 88, which Mr. Ball  
26 correctly referenced in his testimony. That line was referencing New Harmony’s  
27 annual EAC revenue as \$2,061.48 which is really the monthly income. The  
28 correct annual income is twelve times that number or \$24,738 (rounded to the  
29 nearest dollar). The \$2,061.48 number needs to be replaced with the \$24,738 on  
30 line 88 of my direct testimony.

31 Let’s return to Mr. Ball’s objection to “refinancing.” Mr. Ball fails to point out  
32 that in Docket No. 05-057-13, the Commission approved such a request to change  
33 the interest rate for the EAC communities from 13.86% to 9.64%. Also contrary  
34 to what Mr. Ball purports, the suggested 6% refinance rate is on a “community by  
35 community basis.”

---

<sup>1</sup> Roger J. Ball Cost of Service Rebuttal Testimony, page 4 of 15, answer to 1<sup>st</sup> question asked on page, no line numbers provided.

36 **Q: Was this Mr. Ball’s only objection to the Division’s recommendation**  
37 **regarding the EAC issue?**

38 A: No. Mr. Ball takes time to recount briefly the history behind the creation of the  
39 EAC communities, referencing statements made in the various applications at the  
40 time they were filed with the Commission as well as concerns and comments of  
41 the regulatory agencies. Those regulatory concerns and comments were made  
42 before any actual history was available to review. Now, some 10 to 12 years  
43 later, we have a history of what has actually happened regarding these  
44 communities as shown in DPU Exhibit 6.1 filed with the Division’s direct  
45 testimony. It is true that at the time the EAC charges were established the  
46 Commission contemplated the possibility of some of these areas paying off  
47 sooner or later than 15 years. It also is true that the Commission suggested in a  
48 previous docket, as pointed out by Mr. Ball, that one alternative to the EAC  
49 situation is to “refinance” the unpaid balances and amortize the balances over a  
50 longer period of time.<sup>2</sup> However, in retrospect looking again at the Division’s  
51 Exhibit 6.1, the Division is not sure the Commission contemplated “never” as a  
52 realistic pay off scenario, which is the case currently facing the 161 customers in  
53 Brian Head, or “never” plus an additional five or ten years amortization at a lower  
54 rate. The main point here is that even a “refinance” at 6% doesn’t resolve Brian

---

<sup>2</sup> Commission Order on Stipulation, Docket No. 06-057-T04, 2<sup>nd</sup> paragraph, page 25.

55 Head's issue of the customer payments from Brian Head not even covering the  
56 interest on the loan thereby causing the current balance owing to exceed the  
57 original loan amount.

58 **Q: Is there a way to resolve Brian Head's issue?**

59 A: A 6% rate does accelerate the pay off dates for all of the communities except  
60 Brian Head. The reason the Division is concerned about these payoff dates, as  
61 currently forecasted under the currently approved 9.64% rate, is with customer  
62 account updates, the number of customers for some areas decrease which tends to  
63 increase the payoff dates for the remaining customers. The Division considers  
64 this to be discriminatory and unfair to customers who continue to reside in these  
65 communities and who have been paying their monthly amounts. It is analogous to  
66 a bank extending its existing customer's mortgage payoff dates to compensate for  
67 any customers who default on their own mortgage loans. For this reason the  
68 Division recommends that the original expiration date is the latest date these  
69 communities have to pay. They may payoff earlier if growth warrants it.

70 **Q: What if the Commission rejects the 6% refinancing option but approves the**  
71 **recommendation to make the original expiration date the latest dates the**  
72 **current EAC charges are valid?**

73 A: If the Commission only approves the Division's recommendation to make the  
74 original expiration the maximum pay off date then New Harmony's annual

75 revenue of approximately \$25,000 will be picked up by the other GS-1 rate  
76 payers, including those in New Harmony as well as all the other EAC  
77 communities, and the recommended Company rates for the GSR and GSC rate  
78 schedules will change by \$0.0004/Dth. This would increase a typical residential  
79 customer's DNG cost, assuming 80 Dth of annual usage, by 3 cents per year.<sup>3</sup>

80 **Q: What were Mr. Ball's objections to the Division recommendations regarding**  
81 **the GSS rate schedule?**

82 A: Mr. Ball begins by correctly pointing out the error I made in calculating the GSS  
83 rate differentials between the summer and winter GS-1 rates. He calculates the  
84 Summer differential of 2.15 times the GS-1 summer rate and the Winter  
85 differential of 1.89 times the GS-1 winter rate, based on a review of the  
86 Company's tariff as currently presented.

87 **Q: How was such a mistake made?**

88 A: The mistake the Division made in its initial analysis was by beginning to test  
89 some assumptions before all of the relevant facts were fleshed out and failing to  
90 go back and change the initial calculations. The correct ratios are 2.31 times for  
91 the summer and 2.38 times for the winter.

92 **Q: According to Mr. Ball's calculations, the summer differential is 2.15 times**  
93 **and 1.89 times for the winter. Why the difference?**

---

<sup>3</sup> Calculation provided by QGC based on Company's proposed rate design.

94 A: The results Mr. Ball obtained is the answer one gets by simply dividing the GS-1  
95 DNG summer and winter rates into the corresponding GSS winter and summer  
96 rates as found in the Company's current tariff. However, to make a correct  
97 analysis, one must make adjustments to the GSS rates posted in the Company's  
98 tariffs for the Conservation Enabling Tariff (CET) and Demand Side Management  
99 (DSM) amortization rates. Currently these rates are not shown separately but  
100 included at part of the total DNG rate. The Division has recommended that the  
101 details to all of the rates become part of the posted tariff, a recommendation the  
102 Company has agreed to do. The calculations showing the correct ratios are  
103 provided and explained in DPU Exhibit 6.1SR. The point the Division was  
104 trying to make in its direct testimony with the rate comparisons differentials is  
105 how much the actual rates have changed from the original assumptions used to set  
106 the twenty-year pay back period. When one looks at the rates used in the original  
107 GSS filings one can see where the rates were assumed to be fixed and held  
108 constant for twenty years. Mr. Ball did not address the Division's testimony  
109 immediately before the rate differential comparisons which points to the fact that  
110 the twenty-year time period was established using a rate that was double the  
111 current GS-1 rate of \$1.70716 and held constant for the entire twenty-year period.  
112 In actual practice, the GSS areas have been charged a double margin rate that has  
113 been percentage adjusted with each subsequent rate case. This is analogous to  
114 using a fixed rate to set the time period and then changing to a variable rate in

115 actual practice that has adjusted over time when the original analysis used to  
116 justify the twenty year time-period was based on a lower fixed constant rate.

117 **Q: If the Commission approves the Company's and Division's recommendation**  
118 **to split the GS-1 rate class into the GSR and GSC rate classes based on tax**  
119 **codes, what is the potential impact to a GSS commercial customer if the GSS**  
120 **rate class remains as currently designed?**

121 A: DPU Exhibit 6.2SR shows this impact. This exhibit was prepared using  
122 information furnished in response to DPU data request 39.02. Based on the  
123 information for the year 2007, an average of all Commercial GSS customers  
124 whose monthly usage exceeded 45 Dth per month was used to calculate the  
125 monthly volumes (Exhibit 6.2SR Col B). The reason for the different average  
126 rates shown in Column D of the exhibits is due to the declining block designs in  
127 the current GS-1 rates and proposed GSC rate designs. The GSS rates are a flat  
128 rate for summer and winter. As shown in the example, at current rates, the  
129 average rate differential between the GS-1 and GSS rates for Commercial  
130 customers is 3.5 times. For a GSS Commercial customer, it is 2.6 times compared  
131 to a GSC customer at the Company's proposed rate design.

132 **Q: Mr. Ball discusses your use of a 6% ROR applied to the GSS rate schedules.**  
133 **Why did the Division suggest 6% as justification for elimination of the GSS**  
134 **rates?**

135 A: The purpose of making that comparison was to show that by applying the same  
136 6% rate recommended for the EAC communities to the original assumptions used

137 in the GSS filings, a case could have been made for a ten to twelve-year payback  
138 period instead of a twenty-year payback period. The twenty-year time period Mr.  
139 Ball feels is important to adhere to can be changed by altering assumptions. The  
140 simple fact is that the actual rate implementation has not followed the  
141 assumptions used to establish the twenty-year period. Actual costs have not been  
142 tracked separately in the GSS areas. The reality of this fact is whether a ten or  
143 twenty-year payoff is set as the criterion, at the end of those time periods the  
144 Company, the Division, the Commission or any other party has no way of  
145 determining whether or not the purported ROR has been realized. As presently  
146 set up, the current GSS rates are set to expire in November 2012 and September  
147 2013. At that time, the GSS rates will be dropped and the GS-1 rates will become  
148 effective without any formal approval or review by regulatory agencies. Now is  
149 the time, in this rate case, to correct this flawed rate design which adheres to a set  
150 time period but ignores how that period of time was established. It is the  
151 Division's opinion that the GSS rates, as currently applied on a going forward  
152 basis, are no longer just and reasonable.

153 **Q: Mr. Ball points to the fact that the Division mentions the rate impact to the**  
154 **GSR rate class of eliminating the GSS rate class would be an increase in cost**  
155 **of service revenue of \$1.8 million. Is that still the Division's position?**

156 A: The \$1.8 million figure was an estimate of the amount of revenue credit that is  
157 attributed to the GSR rate class in the Division's direct testimony. The Division  
158 asked in a data request for the Company to calculate the rate impact on the GSR

159 and GSC rate class as well as the IS and TS rate classes if the GSS/IS-4/IT-S were  
160 eliminated. Per the response to DPU data request 39.01 based on the Company's  
161 proposed rate design if the GSS rate schedules were eliminated the effect on a  
162 typical GSR customer's DNG cost would be an increase in annual cost of 67  
163 cents. Note that is total annual cost, not increase in rate.

164 **Q: Mr. Ball suggests that the Division's recommendation that future expansion**  
165 **areas be offered the same 6% rate is a discriminatory practice. Does the**  
166 **Division concur?**

167 A: Mr. Ball may have misconstrued the point of the Division's recommendation.  
168 Mr. Ball intimates that current GS-1 customers subsidize future expansion  
169 activities. He cites as references comments from the Division regarding  
170 Panguitch's efforts to secure a special subsidized rate. The Division did not  
171 suggest that future expansion areas be subsidized by current GS-1 rate-payers.  
172 The Division used a 6% rate as a possible rate for future expansion and stated, "In  
173 order for those monthly charges to be reasonable, some areas may need to find  
174 additional funding sources to reduce the total cost of the project that is financed at  
175 a 6% interest rate."<sup>4</sup> The intent of that statement was that additional funding  
176 sources outside of the Company's resources would be needed in order to make  
177 those projects feasible. Of course, to make sure this is not discriminatory, the  
178 current EAC communities would have to have their rate changed to 6%.

---

<sup>4</sup> Pre-filed Direct Testimony of Marlin Barrow, Docket No. 07-057-13, page 11, line 163-166.

179 **CLARIFICATION OF CCS WITNESS DR. DISMUKES STATEMENTS**

180 **Q: What statements does the Division need to clarify regarding CCS Witness**  
181 **Dr. Dismukes?**

182 A: The statements the Division wishes to clarify in Dr. Dismukes rebuttal testimony  
183 are found at lines 97-98 where he states that the Division supports moving away  
184 from a tax-based classification to one that rests more on usage characteristics. In  
185 lines 221 through 224 he more closely states the Division's position by stating the  
186 Division approves the Company's proposed GS-R/GS-C split with an eventual  
187 separate GSC Regular and GSC Large class in the upcoming rate case. Again on  
188 lines 240-243, he intimates the Division's recommendation is to support a GS  
189 class split based on usage rather than a tax classification.

190 **Q: What is the Divisions recommendation regarding the split of the GS-1 class?**

191 A: Although not explicitly stated in Mr. Gregory's direct testimony, on line 366  
192 through line 369 he states his recommendation to approve the split of the GS-1  
193 class into GSR and GSC rate codes. He later discusses in line 394 through line  
194 399 his recommendation that in the next rate case, the GSC class further develop  
195 into a GSC Regular and a GSC Large class based on usage. The initial  
196 recommendation for the split of the GS-1 class into a GSR and GSC class in this  
197 rate case is based on tax codes. The reasons for this recommendation are  
198 discussed in more detail in the Division's Rebuttal testimony filed on September  
199 18<sup>th</sup> with the added recommendation that a task force further study the GSC class

200 to determine the best way to refine the allocation of the GSC class. Given the  
201 reasons raised by the Division in rebuttal testimony with regard to an initial split  
202 based on usage, to go ahead and do so now appears to be untenable.

203 CONFIRM POSITION OF DIVISION REGARDING BSF.

204 **Q: Company Witness Steve Bateson rebuts the Division position regarding the**  
205 **proposed BSF. Does the Division still think the same BSF should be retained**  
206 **in light of the Company's proposed rate changes?**

207 A: Yes, the Division still recommends that all BSF monthly charges should remain  
208 unchanged in this rate case. Company Witness Bateson makes strong arguments  
209 for changing the BSF based on his cost curve analysis. While the Division does  
210 not dispute the Company's methods at this time, the Division does object to the  
211 Company's proposed changes for reasons of timing. As previously stated, the  
212 decoupling of the GS-1 revenues under the CET pilot program should be allowed  
213 to complete the pilot program period without changing BSF structure. The  
214 argument here is whether to follow the cost causation principle of fixed fees  
215 charges coupled with lower volumetric rates as opposed to sending strong  
216 conservation signals with a full decoupling mechanism, such as the CET, and  
217 place the cost recovery in higher volumetric rates with appropriate true-ups to that  
218 rate. That argument should be deferred to the next rate case when the Company  
219 must decide whether to request the continuation of a decoupling mechanism and

220 what role BSF charges will play in that rate design. Until that time, the Division  
221 recommends that the BSF charges remain unchanged.

222 **Q: There are Company recommended changes in BSF's to other rate schedules**  
223 **that are not covered by a CET mechanism. What about those schedules?**

224 A: The Division still is recommending no change to the BSF charge for the other  
225 schedules in this rate case. The reason for this recommendation is to maintain the  
226 same BSF categories in all rate schedules until after the Company's proposed rate  
227 schedule consolidations and revisions can be reviewed and ruled on by the  
228 Commission. Without maintaining the same BSF categories as explained above,  
229 there will be a mixture of meter rating classifications that is not consistent  
230 throughout the rate schedules.

231 **Q: Does this conclude your prepared surrebuttal testimony?**

232 A: Yes it does.
