**Subject:** rate increase for Questar

am writing to show my dissatisfaction with the recent request from Questar for a 45% rate increase. That is unbelievable since they have had record profits for the last year and have also had rate increases every year. I thought the public service commission was suppose to be on the side of the consumer? What is going on here I don't think the people of Utah can afford an average increase on their gas bill by \$25.00. Last year Questar was complaining because it was too warm and the people of Utah didn't use enough natural gas, come on what's going on? I hope you will take another look at this and say enough is enough.....

Thank you  
Marilyn Post
