

inconveniences with the savings of this alternative fuel source while reducing air pollution and helping out our local economy.

Please reconsider increasing the price of natural gas when used in vehicles. It does not make any sense why those who are trying to help our community through buying local and cleaning the air, should pay more for the same fuel used in our homes. We should all benefit from the low cost Wexpro resource.

Sincerely,

Anna Mefford

Subject: CNG Prices

I am writing regarding the rate increase for CNG for my truck. I sell school supplies and travel the State of Utah. The high cost of fuel was keeping me from visiting my customers across the State. After much research I decided to convert a GMC truck over to CNG. The kid cost me nearly 11,000 dollars but after lots of calculations I decided to make the plunge into CNG. It it totally unfair to punish those of us that made the commitment to convert or buy CNG vehicles. I understand a reasonable rate hike but more than double is unfair. There are many more like me that basically are throwing over 10,000 out the window now that regular gas is so low. Please reconsider. Also my truck has a kit called Naturel is is injected and runs great. I just found out it is also eligible for the State Tax Credit. I am sad and feel foolish for trusting that the prices would stay low enough to justify the kit I put on.
