

I am writing in regard to the recent ruling by the Utah Public Service Commission about natural gas vehicles. I strongly disapprove of the recent ruling in DOCKET NO. 07-057-13. The decision to charge national rates to the NGV owners instead of the WEXPRO rates that we have been enjoying. I believe that raising the price that NGV owners have to pay is a poor decision. NGV owners have paid an extra cost for a vehicle or a conversion to use natural gas. By raising the price you will discourage people like me from using the clean fuel. I go out of my way to full with natural gas, this is because it is economical for me. If prices are raised to as much or even near gasoline prices, I will use gasoline instead. I like the fact that NGV's help prevent air pollution, and reduce our dependence on foreign oil. This does not only effect the people using NGV's, but anyone who uses gasoline as well. By using CNG instead of gasoline, we help reduce the demand for oil, helping to reduce the price of gasoline.

I myself am a questar costumer, and use natural gas in my home and at work. The notion that NGV owners are not questar customers is a little silly to me. All of my friends and people I work with that have NGV's are use natural gas in their homes as well.

Please review your decision to change the rates! A low price is the best way to encourage people to continue using their NGV's. NGV owners help clean up our air and reduce the demand on gasoline saveing us all money.

Thank you for your time.

Ben Watts
