RECEIVED

It took 20 years of subsidy and oil to hit \$100/barrel for Utah's citizens to finally start to embrace Utah produced natural gas as a reasonably priced reliable transportation fuel. Why would the PSC throw all that time and rate payer investment out the window at the very time it gains traction. Utah has an abundant supply of natural gas and its production creates local jobs. The PSC has clearly been a big player in encouraging its use as a transportation fuel. Now, it seems you're washing your hands of the matter and walking away. I guess you'd rather have us buy oil from Venezuela, Russia and Iran than use something in our own back yards. Come on...what gives here?

Sincerely,

Christian Williams
