

Feeder Line 26 and Reg Station PV0004 Map

Provo

The blue line in the map above represents Feeder Line 26. The yellow triangle represents regulator station PV0004. As shown, FL26 runs along the Bonneville Shoreline Trail in Provo and also includes a branch that extends east to PV0004. This branch was included in the 2017 budget. The regulator station, PV0004, was not included in the budget.

All feeder lines include branches that feed into single delivery points. The Company uses the term “tap-line” in its internal discussions as a more granular identifier of a portion of feeder line pipe that feeds into a single delivery point as opposed to multiple delivery points.
