)	

**FOR THE DIVISION OF PUBLIC UTILITIES
DEPARTMENT OF COMMERCE
STATE OF UTAH**

**Direct Testimony of
Douglas D. Wheelwright**

July 26, 2017

1

INTRODUCTION AND SUMMARY

2 **Q: Please state your name, business address and title.**

3 A: My name is Douglas D. Wheelwright; my business address is 160 East 300 South, Salt Lake
4 City, Utah 84114. I am a Technical Consultant with the Division of Public Utilities
5 (Division).

6 **Q: On whose behalf are you testifying?**

7 A: The Division.

8 **Q: Please describe your position and duties with the Division.**

9 A: As a technical consultant, I examine public utility financial data and review filings for
10 compliance with existing programs as well as applications for rate increases. I research,
11 analyze, document, and establish regulatory positions on a variety of regulatory matters. I
12 review operations reports and evaluate the compliance with the laws and regulations. I
13 provide written and sworn testimony in hearings before the Utah Public Service Commission
14 (Commission) and assist in the case preparation and analysis of testimony.

15

OVERVIEW

16 **Q: What is the purpose of your testimony in this matter?**

17 A: I will provide comments on the application and will introduce the other Division witness. I
18 will not attempt to discuss all of the individual details of the application but I will address
19 specific issues and concerns within the filing. However, the fact that I do not address a
20 specific detail or issue should not be construed as acceptance.

21 **Q: Please identify the Division's witnesses for this docket.**

22 A: In addition to my testimony, the Division is sponsoring the testimony of Mr. Howard Lubow
23 from Overland Consulting. Mr. Lubow will be providing testimony and perspective
24 concerning the issue of a peak hour requirement.

25 **Q: What is the Company seeking?**

26 A: According to its application, the Company is seeking to charge transportation customers for
27 their use of Firm Peaking Services provided by Kern River Natural Gas Transmission
28 Company (Kern River).¹ Under this firm peaking services contract, Kern River would
29 provide the Company with 100,000 Dth of Firm Peaking Service during the 2017/2018
30 winter heating season. Separately, the Company has entered into a Precedent Agreement
31 with Dominion Questar Pipeline for 250,000 Dth of additional Firm Peaking Service subject
32 to FERC approval.² The FERC application and its relationship to this application pertaining
33 to the Kern River contract are discussed below.

34 **Q: What is the Division's position and recommendation?**

35 A: The Division is not convinced the peak hour contracts are necessary and in the public
36 interest. Therefore, based upon the information that the Division has at this time, the
37 Division cannot recommend that transportation customers pay a portion of the costs
38 associated with the Kern River contract. However, if the contracts are found to be in the
39 public interest, transportation customers should pay a share as discussed in Mr. Lubow's
40 testimony.

41 **Q: Since the initial filing of this Docket, Questar Gas Company (also called the Company)**
42 **has notified the Commission that it is officially doing business under the name**
43 **Dominion Energy Utah. In order to avoid confusion, what name will you be using to**
44 **refer to the Company in this testimony?**

45 A: Effective June 1, 2017, Questar Gas is officially referred to as Dominion Energy Utah, its
46 dba. While the initial application in this Docket was filed under the name Questar Gas, the
47 Tariff and Company correspondence has been changed to Dominion Energy. In my
48 testimony, I will be referring to the applicant as Dominion or the Company. Any references
49 to Questar Gas or Questar Pipeline are the same as Dominion Energy Utah and Dominion
50 Energy Questar Pipeline, respectively.

¹ Application, May 1, 2017, page 3, line 63.

² Docket No. 17-057-12, Dominion Energy Utah Integrated Resource Plan, page 8-4.

51 **Q: Please briefly summarize the work and investigation that has been performed in this**
52 **case.**

53 A: The Division has reviewed the filed testimony of Dominion witness Mr. Kelly Mendenhall
54 along with the attachments and exhibits. In addition, the Division and its consultants have
55 submitted data requests to the Company and conducted interviews with company
56 representatives concerning the transportation contracts and relating to peak day and peak
57 hour planning. The Company has provided additional information in response to the formal
58 data requests and during the interview process to help with the Division's review and
59 analysis.

60 **Q: Please explain the reason for this application and the issues relating to the peak day and**
61 **peak hour within the peak day as you understand it.**

62 A: The issue of a peak hour transportation contract is being addressed in this Docket and has
63 been included in the Integrated Resource Planning (IRP), Docket No. 17-057-12, and the 191
64 Pass-Through, Docket No. 17-057-07. Exhibit 1.3 of this filing refers to an estimated peak
65 hour forecast within the 2016/2017 IRP peak day forecast model. The model shows the
66 expected usage by hour for all firm sales and transportation customers on an extremely cold
67 winter day. The model is used for planning purposes and includes a number of assumptions
68 about the temperature, wind speed, and the estimated usage of the sales and transportation
69 customers during extreme cold weather conditions.

70 On a daily basis, natural gas usage is estimated and brought to the distribution system
71 through a natural gas nomination process. This daily nomination process assumes that the
72 gas will be delivered by the appropriate upstream pipeline evenly throughout a 24-hour
73 period. The Company has represented that in actual practice, General Service (GS) as well
74 as transportation customers do not consume gas evenly throughout the day and that there are
75 certain hours of the day when the consumption exceeds the average daily delivery expected
76 from the pipeline. For planning purposes, it designated this high use period as the peak hour
77 of consumption. The Company has estimated that during the peak hour, the actual usage
78 may be as much as 17% above average amount nominated for that day. According to the
79 current contract with Dominion Energy Utah Pipeline (formerly known as Questar Pipeline),

80 the actual hourly usage amount that is above the average daily amount will be delivered by
81 Dominion Energy Questar Pipeline on an interruptible or best efforts basis and not on a firm
82 delivery basis. The Company explains that on an average day, this will probably not be a
83 problem but it could potentially be a problem during a high demand or peak usage day.

84 While we have not experienced a peak weather event for many years, the Company states
85 that it is concerned that if we were to have a peak day event with extreme weather conditions,
86 there may not be sufficient pressures in the pipeline systems to provide the necessary gas
87 during the peak hours. This issue appears to be only a problem for Dominion Questar
88 Pipeline deliveries and not for Kern River deliveries because Kern River is set up with flow
89 controls which do not allow the Company to withdraw more gas from the Kern River
90 pipeline than the contracted average daily amount.

91 **Q: Do you believe that this Docket should address whether the peak hour contract is**
92 **appropriate or should this Docket only address the allocation of the cost for the peak**
93 **hour contract?**

94 A: There are two issues that need to be addressed in this Docket. The first is whether the
95 contract with Kern River is necessary and in the public interest. If the contract is determined
96 to be appropriate, then the second question is whether a portion of this cost should be
97 allocated to the transportation customers that could benefit from the service.

98 **Q: Do you have any general concerns with the application and the information that has**
99 **been provided?**

100 A: I have several concerns. First, The Company analysis has excluded the natural gas volume
101 for the Lake Side facility in Exhibit 1.5 while the peak day and peak hour analysis on Exhibit
102 1.2 and 1.3 include the Lake Side volume. The Company analysis is incomplete and
103 inconsistent and could lead to an incorrect finding and conclusion.

104 Second, the justification for the peak hour contract is based on the estimated peak day usage
105 forecast generated for the IRP planning process. The IRP planning model assumes extremely
106 cold weather conditions and estimates the usage of general service (GS) customers and firm

107 transportation customers for the peak planning day. The IRP model attempts to forecast
108 customer usage, however the model does not forecast the Lake Side contract in the same
109 way. This one customer represents [REDACTED]³ of the total transportation volume
110 in the coldest winter months. Instead of including an estimate of the usage during cold
111 weather conditions and following the historical usage pattern, the Company assumes that this
112 facility will [REDACTED]
113 [REDACTED]. This assumption is incorrect as will be demonstrated
114 later in my testimony. An incorrect forecast for this single large use customer could have a
115 significant impact on the accuracy of the forecast. An inaccurate estimate of the hourly and
116 the total daily volume can also have an impact on the cause and potential need for a peak
117 hour contract.

118 My third concern is also related to the information that has been provided. The peak day
119 planning model assumes a high volume send-out day for all customers, but the Company has
120 not provided historical information to show how the actual hourly volumes compare to the
121 daily nomination amounts. Exhibits 1.3 and 1.5 represent that on an average day and on a
122 peak usage day, the peak hourly requirement will exceed the daily nomination amount by
123 17%. There has been no historical information presented to verify or validate the amount of
124 gas consumed during the peak hours of a high send-out day. This type of information would
125 be helpful to determine if the actual send-out amounts during peak hours are significantly
126 higher than the daily nomination amounts. The Division has requested that the daily
127 nomination amounts be added to the historical high send-out days for the last several years
128 but the Company has been unable to provide this information.

129 **Q: Can you explain why including the Lake Side facility in the analysis is important?**

130 A: Yes. On a daily basis, the Lake Side electric generation facility [REDACTED]
131 [REDACTED]
132 [REDACTED] the 17% amount
133 identified for the transportation customers but it has not been included or considered in the

³ Three year average of the Lake Side volume for December, January & February.

134 analysis. While the Company has estimated a 17% swing from the average to the peak, the
135 Lake Side facility [REDACTED] swing from the average to the peak. The actual usage data for
136 Lake Side and for all customers is considered confidential, however due to the large volume
137 of this customer and the potential impact to the system, it is important to understand the
138 historical usage and how the nomination cycles are being used by this customer.

139 In recent years, the Federal Energy Regulatory Commission (FERC) changed the natural gas
140 nomination cycle to accommodate better coordination between electric generation and gas
141 distribution but no analysis has been included to see if large use customers or electric
142 generation facilities are using the inter-day nomination cycles to reduce the impact to the
143 distribution system. Requiring high usage customers to utilize inter-day nominations could
144 possibly reduce or eliminate the need for peak hour contracts.

145 **Q: If we have not had a peak weather event for some time, why is the peak hour now a**
146 **concern and why has the Company purchased the Kern River peak hour contract?**

147 A: If the Company were to experience a peak day event, transportation contracts on upstream
148 interstate natural gas pipelines or alternate plans must be in place in order to meet the peak
149 day requirement. The peak hour contract has been purchased to provide additional firm
150 transportation during the peak usage hours of the peak usage day. In prior years, Pipeline has
151 allowed the Company to draw the additional gas during peak hours without a formal contract
152 agreement.

153 In addition to meeting the transportation needs during extreme cold weather conditions, it is
154 the Division's understanding that the Kern River peak hour contract was used during the last
155 heating season under normal operating conditions. While the maximum amount of firm
156 transportation is set by the contract limit, the daily amount of firm transportation is reduced
157 to the nomination amount on any given day. Even though the Company may have firm
158 transportation contracts for 1.74 BCF for a peak planning day, when weather conditions are
159 not extreme and daily nominations are lower than the maximum amount, the firm
160 transportation amount is reduced to the nominated amount. Any fluctuation or additional gas
161 that is withdrawn during peak hours of the day are delivered on a best efforts basis and would

162 not have firm delivery rights. During normal weather conditions, it is unclear to the Division
163 why a peak hour contract would be necessary since there would likely be excess capacity
164 available from the pipeline.

165 **Q: Are you convinced that the Company’s solution to the peak hour issue is the best choice**
166 **and that this issue has been adequately reviewed?**

167 A: No. As addressed by Mr. Lubow, the Division is not aware of another gas distribution
168 company utilizing peak hour contracts. In other words, it appears that Dominion’s adoption
169 of peak hour contracts is unique in the industry. In addition to the Kern River Contract, the
170 Company has entered into a Precedent Agreement with Dominion Questar Pipeline for
171 additional peak hour service and the tariff application is in front of FERC at this time.
172 However, both the Kern River peak hour tariff and the Dominion Questar Pipeline tariff were
173 created at the request of Dominion Energy (Questar Gas) with no other pipeline customers
174 requesting this type of service.

175 The cost for the peak hour transportation contract with Kern River was included in the
176 Company’s last 191 Pass-Through filing⁴ but the peak hour contract and the associated costs
177 have not been thoroughly reviewed. The most recent 191 Pass-Through filing that included
178 the Kern River peak hour contract was approved by the Commission on an interim basis and
179 is subject to further Division review and audit. The Division is not convinced that this is a
180 valid expense or that this cost should be paid by ratepayers. If the proposed Dominion
181 Questar Pipeline tariff provisions are approved by FERC, it is anticipated that the Company
182 would include the cost of this additional contract in future 191 Pass-Through filings and
183 would request that a portion of these costs be passed on to transportation customers.

184 It is unclear to the Division how or why the Company is pursuing an additional contract with
185 Dominion Questar Pipeline to solve the “peak hour problem” when the source of the
186 “problem” appears to be Dominion Questar Pipeline’s inability to provide firm delivery to
187 meet the hourly demand. The Kern River peak hour contract along with the pending future

⁴ Docket No. 17-057-07, Pass-Through Filing.

188 contract with Dominion Energy Questar Pipeline should be carefully reviewed and
189 understood by all parties.

190 **Q: Has the Company identified other options that could be available to address a portion**
191 **of this problem?**

192 A: Yes. In Docket No. 14-057-31, Company witness Mr. William Schwarzenbach indicated that
193 transportation customers should adjust their daily nomination amounts using the inter-day
194 cycles to accommodate changes in the actual usage:

195 **Q. In addition to adjusting nominations daily, do TS Customers and their**
196 **agents have the ability to change their nominations during the day to match**
197 **unexpected changes?**

198 A. Yes. While most TS Customers and Agents do not nominate daily, they currently
199 have 4 cycles per day to adjust nominations to match customer usage. This
200 includes two cycles during the day when TS Customers or their Agents can
201 update their nominations for that day (intraday cycles). The Federal Energy
202 Regulatory Commission (FERC) has also approved the addition of another
203 intraday cycle starting in April 2016. In the event customer usage is different
204 than the nomination **for the day**, the TS Customer or their Agent has multiple
205 opportunities to adjust the nomination **during the day** to more closely match the
206 customer's usage.

207 **Q. Why did the FERC add a cycle?**

208 A. The FERC added a cycle to allow customers to better match their supplies to
209 usage **throughout the day. As customer demand changes from hour-to-hour**
210 **through the day, customers can change their nominations on the pipeline to**
211 **match the changing demands.** Notably, this is much more frequent nominating
212 than the daily adjustments that the Company hopes to achieve with the charges
213 proposed in this docket.⁵

214 If the Company expects the transportation customers to make inter-day adjustments using the
215 nomination cycles, the same process may be able to work for the Company during extreme
216 weather conditions. The Division is not convinced that the Kern River and Dominion
217 Questar Pipeline contracts represent the most cost-effective way to address the Company's
218 concern, if that concern is ripe for addressing at all.

⁵ Docket No. 14-057-31, Direct Testimony of William F. Schwarzenbach, page 8, line 188. (emphasis added)

219 **Q: Are there other contracts or services in place to address fluctuations from the daily**
220 **nomination amounts?**

221 A: The Company already has no-notice transportation service in place for 203,542 Dth. This
222 contract is included in the 191 filing and a portion of the cost is shared with transportation
223 customers through the transportation imbalance charge. In Docket No. 14-057-31, Company
224 witness Mr. Kelly Mendenhall identified the purpose of the no-notice transportation contract
225 as follows:

226 The No-Notice Transportation service gives the Company the flexibility to deliver gas to
227 or from the system in between normal nomination cycles. This service is being used
228 when load does not match nominations at the QGC/QPC gate stations. This includes
229 imbalances for transportation customers. This service is paid for on a monthly basis by
230 sales customers whether it is used or not.

231 It is unclear to the Division why there is a need for both no-notice service and the peak hour
232 service when the no notice service and the peak hour service appear to be providing the same
233 or similar services. The Company has not provided sufficient information concerning the
234 difference between these services or why both are needed.

235 **Q: Do you agree with the way that the cost for the Kern River contract has been allocated**
236 **to the transportation customers?**

237 A: No. In allocating the cost of the Kern River contract, the Company has included only the
238 sales and firm transportation customers and has excluded the impact of the Lake Side
239 contract, which represents [REDACTED]. Even after
240 excluding the Lake Side contract, the remaining transportation customers represent an
241 average of 20.6%⁶ of the total volume during the winter months. If the Commission finds
242 that the peak hour contract is in the public interest, it would be more appropriate to allocate a
243 portion of the cost to transportation customers using a 3 or 5 year average amount. It appears
244 that the 13.9% allocation identified in Mr. Mendenhall's testimony has been calculated using
245 only 2016 volume information and excludes interruptible transportation customers.

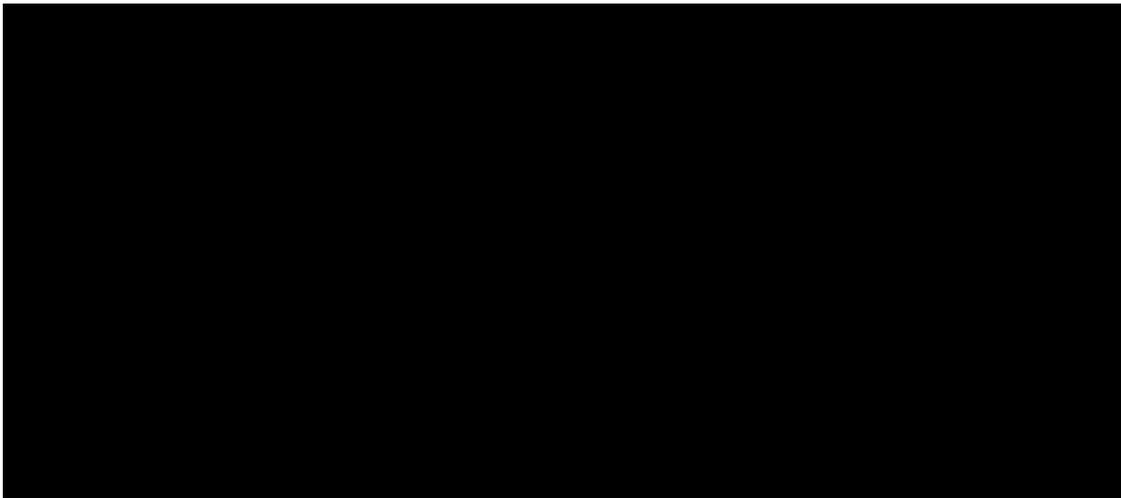

⁶ Three year average of the total monthly volume for December, January & February for all transportation customers excluding Lake Side.

246 **Q: You mentioned that the Lake Side power plant [REDACTED]**
247 **[REDACTED]. Do you have specific information to show**
248 **how gas is consumed on an hourly basis by the Lake Side facility?**

249 A: Yes. Chart 1 below is a summary of the hourly usage for the period from November 15, 2016
250 through February 15, 2017. This is the same time period that was used by the Company in
251 QGC Exhibit 1.5 and represents the winter months covered by the Kern River contract. As
252 shown in the chart, the Lake Side facility [REDACTED]

253 [REDACTED]
254 [REDACTED] While the Company has chosen to exclude
255 the Lake Side plant from the analysis, including the usage pattern from this customer is
256 important in order to understand how the Dominion distribution system is being used.

257 Chart 1

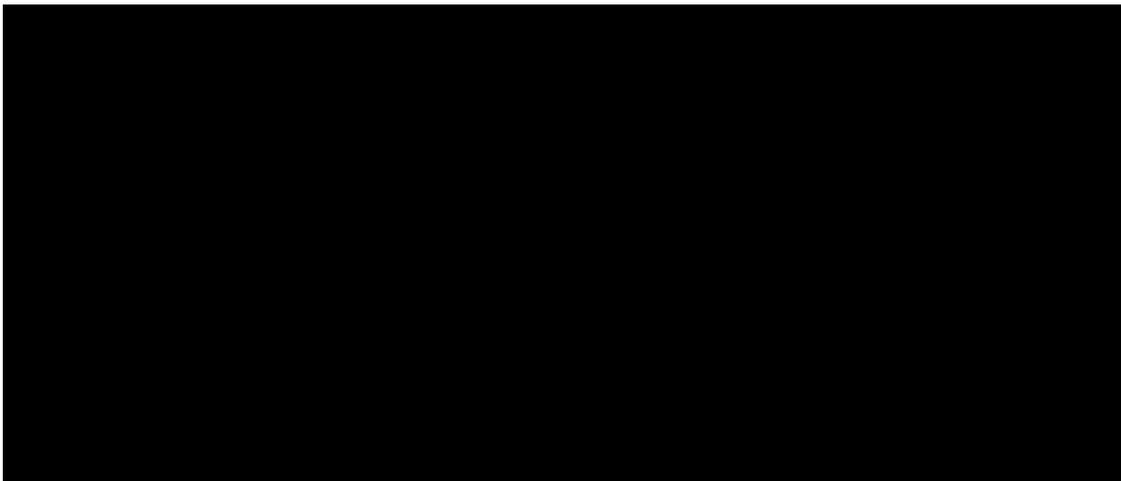

258
259 | The usage pattern for this customer is quite different than the information presented in QGC
260 Exhibit 1.5 and represents large transportation volumes. There has been no analysis or
261 information included with this filing to determine if the actual usage for this customer is
262 impacting the Dominion system or if this or if any of the customers are using the inter-day
263 nominating cycles. As noted above, creating additional nominating cycles was intended to
264 improve the coordination of natural gas and the electric markets. Encouraging this one

265 customer or any of the other large use transportation customers to better utilize the
266 nomination process could possibly reduce the need for the peak hour contracts.

267 **Q: Has there been [REDACTED] at the Lake Side plant and [REDACTED]**
268 **[REDACTED]**

269 **A:** It is possible that the [REDACTED] in the
270 peak hour usage. Chart 2 below is a comparison of the average hourly usage for the Lake
271 Side plant for the month of January 2015, 2016 and 2017. Note that the usage pattern for this
272 facility does not match the flat burn pattern used to create the IRP forecast.

273 Chart 2

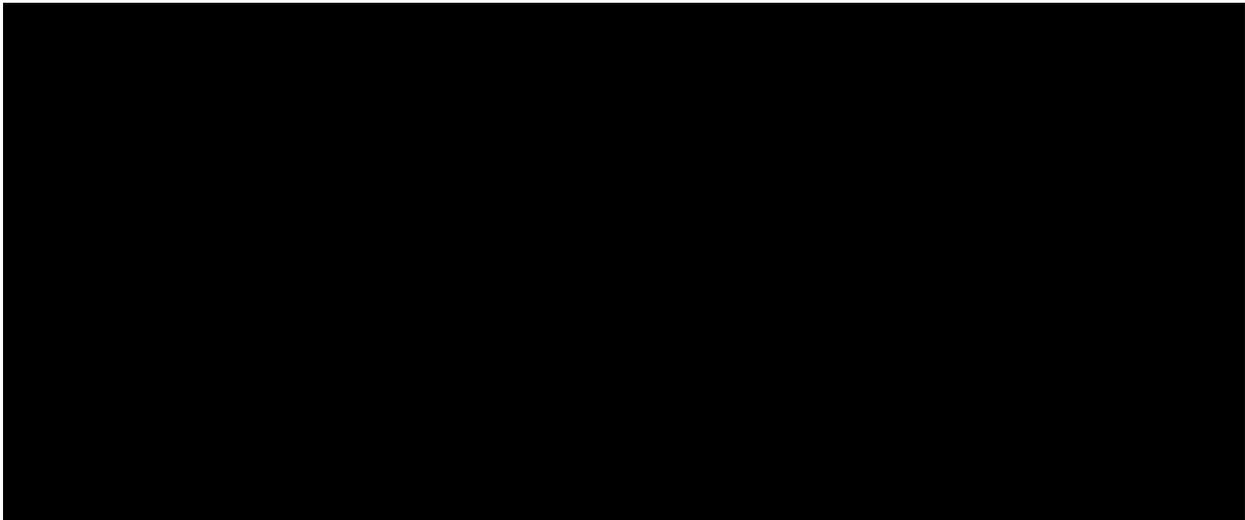

274
275 [REDACTED]

276 [REDACTED] The Lake Side 2 facility became operational in June
277 2014 and both the Lake Side 1 and the Lake Side 2 facilities [REDACTED]
278 [REDACTED]
279 [REDACTED]
280 [REDACTED]

281 **Q: The IRP model assumes the full [REDACTED] the Lake Side plant with a flat**
282 **utilization rate. Do you have any additional information to show that the utilization**
283 **rate for this facility for an extended period of time?**

284 A: Yes. Chart 3 below shows the actual daily Dth usage for the Lake Side facility from January
285 1, 2016 through March 31, 2017. This information shows that [REDACTED]
286 [REDACTED]
287 [REDACTED] during the winter heating season.

288 Chart 3

289
290 While this chart includes only the last 15 months, it clearly shows the fluctuation in the natural
291 gas usage and how increases or decreases could impact the Dominion system. Without
292 including a better understanding of the hourly, daily and seasonal usage of this and other
293 large use transportation customers, a more detailed analysis of the need for peak hour
294 contracts cannot be determined.

295 **CONCLUSIONS AND RECOMMENDATIONS**

296 **Q: What conclusions have you reached concerning the peak hour contract and the**
297 **allocation of a portion of the contract cost to transportation customers?**

298 A: Based on information that has been provided, the Division is not convinced the peak hour
299 contracts are necessary and in the public interest. Therefore, based upon our investigation
300 and the information that the Division has at this time, the Division cannot recommend that
301 transportation customers pay a portion of the costs associated with the Kern River contract.

302 However, if the contracts are found to be in the public interest, transportation customers
303 should pay a share as discussed in Mr. Lubow's testimony.

304 **Q: Does this conclude your testimony?**

305 A: Yes.
