THROUGH APPLICATION OF)	DPU Exhibit 1.0 DIR
DOMINION ENERGY FOR AN)	
ADJUSTMENT IN RATES AND)	Direct Testimony
CHARGES FOR NATURAL GAS)	Douglas D. Wheelwright
SERVICE IN UTAH)	
)	
)	

**FOR THE DIVISION OF PUBLIC UTILITIES
DEPARTMENT OF COMMERCE
STATE OF UTAH**

**Direct Testimony of
Douglas D. Wheelwright**

April 23, 2018

1 **Q: Please state your name, business address and title.**

2 A: My name is Douglas D. Wheelwright; my business address is 160 East 300 South, Salt Lake
3 City, Utah 84114. I am a Technical Consultant with the Division of Public Utilities
4 (Division).

5 **Q: On whose behalf are you testifying?**

6 A: The Division.

7 **Q: Please describe your position and duties with the Division.**

8 A: As a technical consultant, I examine public utility financial data and review filings for
9 compliance with existing programs as well as applications for rate increases. I research,
10 analyze, document, and establish regulatory positions on a variety of regulatory matters. I
11 review operations reports and evaluate the compliance with the laws and regulations. I
12 provide written and sworn testimony in hearings before the Utah Public Service Commission
13 (Commission) and assist in the case preparation and analysis of testimony.

14 **Q: Please identify the Division's witnesses for this docket.**

15 A: In addition to my testimony, the Division is providing testimony from Mr. Eric Orton and is
16 sponsoring the testimony of Mr. Howard Lubow, Mr. Frank DiPalma and Mr. Kenneth Ditzel
17 from Overland Consulting. Each of the Overland witnesses will provide a different
18 perspective of the peak hour issue and the transportation requirements.

19 **Q: Can you provide some background relating to the peak hour contracts that are the**
20 **focus of this proceeding?**

21 A: Yes. Information relating to the peak hour transportation contracts has been included in
22 several other Dockets including Integrated Resource Planning (IRP),¹ the 191 Pass-Through²
23 and Peak Hour Cost Allocation to Transportation Customers.³ As part of the approval for

¹ Docket No. 17-057-12.

² Docket No. 17-057-07 and 17-057-20.

³ Docket No. 17-057-09.

24 interim rates in this docket, the parties signed a stipulation agreement to address concerns
25 with the peak-hour service contracts.

26 Since the concept of a peak hour was originally presented, the Division representatives have
27 participated in numerous meetings and discussions with Company representatives and have
28 submitted numerous data requests to gain a better understanding of the purported need for
29 this type of service. In the Peak Hour Cost Allocation Docket, the Division hired Overland
30 Consulting to review this issue and provide analysis and perspective. The Division did not
31 attempt to include or repeat all of the testimony from the Peak Hour Cost Allocation Docket
32 in this Docket, however some of the same issues will likely be addressed in both Dockets. In
33 order to gain a better understanding of the peak hour issue, the Division encourages the
34 Commission and other parties to review the testimony and exhibits in both Dockets.

35 **Q: Please briefly summarize the work and investigation that has been performed in this**
36 **case.**

37 A: The Division has reviewed the filed testimony of Dominion witness Mr. David Landward,
38 Mr. Michael Platt, and Mr. William Schwarzenbach III, along with the attachments and
39 exhibits. In addition, the Division and its consultants have submitted numerous data requests
40 to the Company and conducted interviews with company representatives concerning the
41 transportation contracts and peak day and peak hour planning. The Company has provided
42 additional information in response to the formal data requests and during the interview
43 process to help with the Division's review and analysis.

44 **Q: What is the Division's position and recommendation?**

45 A: Based on significant concerns with the accuracy of DEU's underlying tools for defining its
46 design models, the Division remains unpersuaded that the contracts are in the public interest.
47 They appear to be an expensive, unnecessary purchase to forestall a problem that may not
48 exist and for which other solutions might be found.

49 **Q: Do you have any general concerns with the application and the information that has**
50 **been provided?**

51 A: I have a concern with DEU Exhibit 3.4 in Mr. Schwarzenbach's testimony. This exhibit
52 appears to support the need for peak hour service by showing the number of times that the
53 daily flow rates have exceeded the daily nomination amount or RDC. While this exhibit is
54 intended to support the need for peak hour service, the footnote on this exhibit states
55 "volumes depicted are approximate and are for illustrative purposes only." Since discussions
56 related to this issue have been going on for some time, it is unclear to the Division why
57 approximate or illustrative information has been provided instead of actual values.

58 Exhibit 2.4 in Mr. Platt's testimony provides an illustration of what could happen to the
59 pressures within the distribution system under extreme conditions. In response to DR 1.18
60 the Company indicated that this model assumes that "no volumes above the RDC are used or
61 available, and no other sources were used to meet demand." In other words, the model is
62 assuming that no gas is available from storage in Clay Basin or the Aquifers and that every
63 option for market purchases or additional volume from Kern River is unavailable. While it is
64 interesting and important to see how quickly the system would lose pressure, the probability
65 of this occurring is extremely remote. If these conditions were to occur, it is unlikely that the
66 peak hour contracts would be sufficient to maintain the system for any length of time.

67 **Q: If we have not had a peak weather event for some time, why is the peak hour now a**
68 **concern and why has the Company purchased the Kern River and the DEQP peak hour**
69 **contracts?**

70 A: If the Company were to experience a peak day event, transportation contracts on upstream
71 interstate natural gas pipelines or alternate plans must be in place in order to meet the peak
72 day requirement. The peak hour contracts have been purchased to provide additional firm
73 transportation during the peak usage hours of the peak usage day. In prior years, Dominion
74 Energy Questar Pipeline (DEQP) has allowed the Company to draw the additional gas during

75 peak hours without a formal contract agreement but will no longer provide this service on a
76 firm basis.

77 **Q: Has the volume of upstream transportation contracts increased over time as the natural**
78 **gas usage from sales customers has increased?**

79 A: No. In Docket No. 17-057-09, the Company provided Exhibit 1.8R to show the growth in
80 firm sales volume compared to the growth in firm transportation contracts. The information
81 from Exhibit 1.8R has been included below.

82 Table 1

(A)	(B)	(C)	(D)
Heating	Actual Firm	Design Peak	Firm
Season	Sales (Dth)	Firm Sales	Upstream
		(Dth)	Transport
			(Dth)
1997/98	635,083	958,798	824,859
1998/99	772,309	977,251	864,859
1999/00	592,807	999,650	848,859
2000/01		1,024,602	828,959
2001/02	779,359	1,046,073	913,559
2002/03	662,201	1,086,287	970,559
2003/04	725,763	1,068,527	1,004,859
2004/05	720,777	1,076,542	1,095,442
2005/06	818,191	1,106,256	1,004,442
2006/7	952,121	1,144,307	1,004,442
2007/8	874,365	1,163,302	954,442
2008/9	846,142	1,195,606	954,442
2009/10	899,353	1,256,979	954,442
2010/11	989,785	1,271,746	956,327
2011/12	763,290	1,280,770	942,654
2012/13	984,588	1,285,693	977,654
2013/14	911,101	1,267,049	977,654
2014/15	996,189	1,285,857	977,654
2015/16	880,378	1,305,701	977,514
2016/17	974,095	1,316,588	1,045,139
Percentage			
Increase	53%	37%	27%

83

84 From 1997 to 2016, actual firm sales increased by 53% while firm upstream transportation
85 increased by only 27%. The last line of the table shows that the design peak volume and the
86 upstream firm transportation volume have not increased at the same rate as the increase in
87 firm sales volume. I have highlighted 2004 and 2016 to show how the Company had more
88 upstream firm transportation capacity in place for the 2004/05 heating season than it did for
89 the 2016/17 heating season. From 2004 to 2016, firm sales increased by 35% while firm
90 transportation decreased by 4.6%. Based on this comparison it would appear that the
91 Company should have purchased additional firm transportation capacity instead of peak hour
92 contracts. This information also supports the position outlined by Overland Consulting that
93 there are flaws in the calculations for the design peak, among other issues they addressed and
94 the recommendation to purchase additional firm transportation capacity.⁴

95 **Q: In previous testimony relating to the peak hour contracts you have been concerned with**
96 **the way the Company has modeled the Lake Side generation facility. Do you still have**
97 **concerns with the information that has been provided?**

98 A: Yes. It is the Division's understanding that the unsteady state model used to estimate the
99 amount of transportation service calculates the hourly volume and usage patterns for GS
100 customers as well as some transportation customers. This same logic and usage pattern has
101 not been used to estimate the volume and historical usage patterns for the Lake Side electric
102 generation facility. Instead of including an estimate of the usage during cold weather
103 conditions and following the historical usage pattern, the Company assumes that this facility
104 will [REDACTED]
105 [REDACTED]. In response to DR 1.26, the Company has acknowledged
106 that [REDACTED] for the Lake Side facility and
107 has acknowledged that [REDACTED]
108 This one customer represents [REDACTED]⁵ of the total transportation volume in the
109 coldest winter months and an incorrect forecast for this single large use customer could have

⁴ Docket No. 17-057-09, Testimony of Howard E. Lubow, page 10, line 258.

⁵ Three year average of the Lake Side volume for December, January & February.

110 a significant impact on the accuracy of the forecast. An inaccurate estimate [REDACTED]
111 [REDACTED] could have an impact on the [REDACTED] for a peak hour contract.

112 In response to DR 4.07 the Company provided the actual hourly usage for the Lake Side
113 facility on November 11, 2016, which is shown below.

114 Chart 1

115
116 On November 11, 2016, the usage peaked at approximately [REDACTED]
117 [REDACTED] Even though the peaks occur at
118 different times of the day, the hourly swings for Lake Side are [REDACTED] 17%
119 peak hour swing identified as a concern by the Company.

120 **Q: Is the actual usage pattern for Lake Side consistent with the language and requirement**
121 **of the contract?**

122 A: No. In response to DPU DR 1.26 and 1.30, the Company indicated that “Lake Side is
123 required to deliver its gas into the DEUWI system as it uses the gas” and gas must be burned
124 on a “Steady-State” basis or burned evenly throughout the day. Since the Lake Side facility
125 does not utilize the gas evenly throughout the day, additional volumes consumed must be
126 provided by either DEQP or Kern River when the uneven usage does not match the ratable
127 delivery amounts. In response to DR 4.05 the Company indicated that “DEUWI’s Gas

128 Control coordinates closely with the upstream pipelines (DEQP and Kern River) to allow for
129 operationally available hourly usage rates that may deviate from the scheduled quantity.”
130 This inconsistency places strains on the system that may not be properly addressed by
131 acquiring a peak hour service targeted to GS customers. Addressing the specific Lake Side
132 inconsistency may substantially resolve the need for peak hour service.

133 **Q: The Company has indicated that Lake Side is not a concern since the peak of the Lake**
134 **Side demand curve occurs at a different time during the day than the peak for GS**
135 **customers. Do you agree with the Company?**

136 A: Based on the information that has been provided, I agree that the peak demand time for Lake
137 Side is different than the peak demand for GS customers. I do not agree that the impact of
138 Lake Side should be ignored because the peak hours are different or because it is served
139 under a special contract. DEU should be looking at, and planning for the requirements of the
140 total distribution system. [REDACTED]

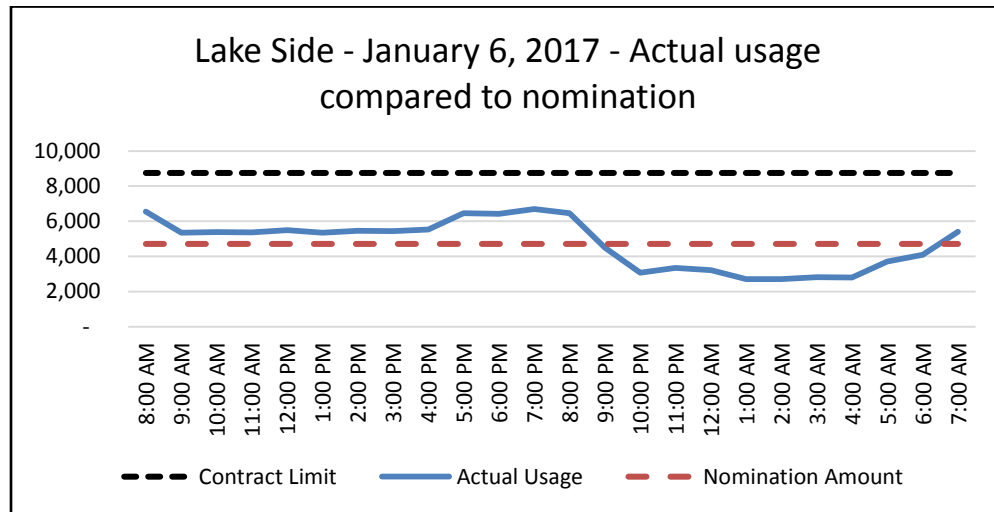

141 [REDACTED]

142 January 6, 2017 has been identified in Mr. Landward’s testimony as an extremely cold day
143 with distribution challenges. In response to DR 1.06 and 1.07, the Company provided the
144 nomination amount and actual usage for the Lake Side facility on that day. Chart 2 below
145 shows that on this critical day, the actual usage is greater than the nomination amount during
146 the peak hours of concern to GS customers.

147

148

Chart 2

149

150 On January 6, 2017, the actual hourly usage was greater than the ratable nomination amount
151 for most of the day. In response to DR 4.06, the Company states;

152 Historically, either or both of the upstream pipelines DEQP and Kern River
153 may provide additional gas to handle hourly burn rates greater than the
154 expected uniform or even burn rate based on the scheduled quantity.

155 In this situation, additional gas was provided to Lake Side from 8 am to 9 pm above the
156 nomination amount, which could contribute to the operational shortage on that day and could
157 potentially impact GS customers. The response to DR 1.30 states that “if Lake Side needed
158 its own Peak Hour Services, it would need [REDACTED]
159 [REDACTED]. The actual usage by this customer is
160 significantly different in terms of the actual hourly burn rate when compared to the total
161 contract amounts and even burn rate used to generate the Company’s forecast.

162 **Q: The Company has indicated that Lake Side usage is not a concern since the Company**
163 **has a flow control valve and could curtail usage if necessary. Do you agree?**

164 A: No, and there has been some confusion related to the purpose of the flow control valve at this
165 facility. The Company has indicated that if operationally necessary, it has the ability to

166 curtail the flow of gas to the Lake Side facility however it has never done so. In response to
167 DR 1.29, the Company stated;

168 The Company utilizes data from the flow control valves at the DEU and Kern
169 River interconnects daily to ensure that total daily flows from each source
170 match nominated quantities from each source. To date, Lakeside has not
171 taken gas at non-uniform flow rates above the nomination beyond a quantity
172 that has been operationally available or to the point that the flow rate has
173 compromised the integrity of DEU's system. Therefore, the Company has not
174 utilized the flow control valves to stop flow to Lakeside.

175 This statement as well as the response to DR 4.10 would indicate that control valve at Lake
176 Side is used on a daily basis by the Company, at least for monitoring. It is the Division's
177 understanding that the purpose and need for peak hour service is due to the upstream limits
178 and the availability of gas in excess of the ratable nomination amount. If we apply the same
179 logic and justification that is used for Lake Side, GS customers have not taken gas on non-
180 uniform flow rates above the nomination beyond a quantity that has been operationally
181 available. Under that definition there is no need for peak hour service for GS customers.

182 **Q: Do you have information to show how the set point has been used with the Lake Side**
183 **flow?**

184 A: The Company provided set point values and Lake Side flow information for November 11,
185 2016 in response to DPU DR 4.10. Chart 3 shows how the FL26 setpoint was adjusted
186 during the day to account for the flow from DEQP and from Kern River.

191

[REDACTED]

192

[REDACTED]

193

Q: The Company has no-notice transportation service in place to deal with daily

194

fluctuations in the nomination amounts. If the Company has peak hour contracts, do

195

you believe it still needs the no-notice transportation contract?

196

A: The Company currently has no-notice transportation service in place for 203,542 Dth. It is

197

not clear to the Division why both contracts are necessary or if the amount of no-notice

198

transportation is still appropriate with peak hour service. The peak hour contract works to

199

provide firm delivery of additional gas volume during certain hours of the day when the flow

200

rate exceeds the ratable daily nomination amount. No-notice allows for adjustment of the gas

201

volumes so that deliveries can be adjusted outside the normal nomination cycles. If the No-

202

notice cannot provide additional volumes above the RDC on a firm basis, (under nomination)

203

it would seem that the benefit of no-notice would be to provide for the movement of only the

204

excess gas (over nomination) on a daily basis outside of the nomination cycles. No-notice

205

service may be able to provide additional gas to the system in excess of the RDC. Since the

206 no-notice appears to be useful only if there is excess gas to the system, the contract amount
207 for no notice service may need to be reevaluated.

208 **Q: Has the Company provided the calculation to determine the amount of no-notice service**
209 **that is required?**

210 A: No. In response to DR 9.01, the Company stated that the current contract was last amended
211 on May 20, 1994. It seems strange to the Division that with all of the growth that has
212 occurred on the Dominion system and the represented importance of no-notice service, that
213 this contract has not been adjusted for 24 years.

214 **Q: What conclusions have you reached concerning the peak hour contract and the**
215 **allocation of a portion of the contract cost to transportation customers?**

216 A: Based on significant concerns with the accuracy of DEU's underlying tools for defining its
217 design models, the Division remains unpersuaded that the contracts are in the public interest.
218 They appear to be an expensive, unnecessary purchase to forestall a problem that may not
219 exist and for which other solutions might be found.

220 **Q: Does this conclude your testimony?**

221 A: Yes.
