

### **18-057-14: 2018 Semi-Annual Pass-Through – Tech Conference Questions**

DEU's October 2018 pass-through filing, "Other Inputs" tab cells e164 through 166, identifies the peak day demand forecast decatherms on a Utah, Wyoming, and total system basis. The total system number is consistent with that presented in DEU's 2018 IRP. Please identify where the Utah and Wyoming peak day forecast decatherms can be found in the IRP. If they are not available in the IRP, please explain how the peak day decatherms are determined for Utah and Wyoming.
