1           **INTRODUCTION**

2   **Q.    WHAT IS YOUR NAME, OCCUPATION AND BUSINESS ADDRESS?**

3   A.    My name is Donna Ramas. I am a Certified Public Accountant licensed in  
4       the State of Michigan and Principal at Ramas Regulatory Consulting, LLC,  
5       with offices at 4654 Driftwood Drive, Commerce Township, Michigan  
6       48382.

7   **Q.    HAVE YOU PREVIOUSLY SUBMITTED TESTIMONY IN THIS**  
8       **DOCKET?**

9   A.    Yes. I submitted direct testimony on behalf of the Utah Office of  
10       Consumer Services (“OCS” or “Office”) in this docket on October 17,  
11       2019.

12   **Q.    WHAT IS THE PURPOSE OF YOUR SURREBUTTAL TESTIMONY?**

13   A.    I respond to the following issues addressed in the rebuttal testimony of  
14       DEU witness Jordan K. Stephenson: the 2020 capital budget and  
15       associated additions to plant in service; dismantling costs associated with  
16       the transponders being replaced by the Company; the lead-lag factors  
17       used in determining cash working capital; application of inflation factors to  
18       base year O&M expenses; Excess Deferred Income Tax (EDIT) update  
19       and amortization; expense accrual updates; and outside contractor costs.  
20       I also respond to the rebuttal testimony of DEU witness Alan Felsenthal in  
21       the area of pensions.

22 **Q. AFTER REVIEWING THE REBUTTAL TESTIMONIES FILED BY DEU,**  
23 **ARE YOU REVISING ANY OF THE RECOMMENDATIONS**  
24 **PRESENTED IN YOUR DIRECT TESTIMONY?**

25 A. Yes. Based on additional support provided by Mr. Stephenson in his  
26 rebuttal testimony and exhibits, coupled with additional information  
27 recently received in response to discovery, I am no longer recommending  
28 an adjustment to property tax expense.

29 Additionally, I agree the plant-related EDIT amortization should be  
30 revised based on updated information. In Mr. Stephenson's rebuttal  
31 testimony, at page 5, lines 122 – 123, he expresses the Company's  
32 agreement with UAE witness Kevin Higgin's reduction to the plant-related  
33 EDIT amortization amount. The actual amount of plant-related EDIT  
34 amortization under the ARAM amortization method was lower than what  
35 was previously projected by the Company and incorporated in both Tax  
36 Surcredit 3 and in DEU's initial filing. I agree that this revision to the  
37 plant-related EDIT amortization based on the more recent actual  
38 information is reasonable and appropriate.

39 In my direct testimony, and in the direct testimony of Mr. Higgins,  
40 we both recommended that customers receive the benefit of the  
41 amortization of the plant-related EDIT for the period January 1, 2019  
42 through the rate effective date of this case. I recommended the extension  
43 of Tax Surcredit 3 and Mr. Higgin's recommended implementing a new  
44 Tax Surcredit 4. Company witness Stephenson proposes in his rebuttal

45 testimony that Tax Surcredit 3 be modified and extended an additional  
46 twelve months to May 2021. He also proposes that beginning on June 1,  
47 2020, the surcredit be reduced from \$4,027,240 to \$3,600,699. The  
48 reduction accounts for the overstatement of the 2018 plant-related EDIT  
49 amortization caused by the actual amortization being lower than  
50 anticipated. I agree that the proposal presented in Mr. Stephenson's  
51 rebuttal testimony to extend the tax surcredit twelve months and reduce  
52 the amount to \$3,600,699 effective June 1, 2020 is reasonable and  
53 appropriate.

54 I am also recommending a new adjustment to depreciation expense  
55 caused by the Company's accounting for the dismantling costs associated  
56 with the replacement of the Elster transponders discussed in Mr.  
57 Stephenson's rebuttal testimony.

58 **Q. IN YOUR DIRECT TESTIMONY, YOU PRESENTED THE OCS'**  
59 **RECOMMENDED CHANGE TO THE CURRENT LEVEL OF UTAH**  
60 **REVENUE REQUIREMENT. DO ANY OF THE MODIFICATIONS**  
61 **DISCUSSED ABOVE IMPACT THAT AMOUNT?**

62 A. Yes. Removing the property tax expense adjustment recommended in my  
63 direct testimony, the revision to the plant-related EDIT amortization, and  
64 the new adjustment to depreciation expense all impact the revenue  
65 requirement presented in my direct testimony. My direct testimony  
66 recommended a \$14,179,342 reduction in the current level of Utah  
67 revenue requirement based on CET allowed revenues prior to the removal

68 of expenses in the test year associated with the LNG facility.<sup>1</sup> The  
69 revisions discussed above change the recommended reduction from  
70 \$14,179,342 to \$11,468,230 prior to the removal of the LNG facility  
71 outside service costs.

72 **Q. WHAT CHANGES DID YOU MAKE TO THE REVENUE REQUIREMENT**  
73 **MODEL FILED WITH YOUR DIRECT TESTIMONY FOR THE**  
74 **MODIFICATIONS DISCUSSED ABOVE?**

75 A. First, I turned off the property tax expense adjustment in the control panel.  
76 As such, the adjustment recommended in my direct testimony no longer  
77 impacts the revenue requirements as a result of this change. I also  
78 replaced the EDIT adjustment incorporated in my original rate case model  
79 with a revised adjustment that incorporates the impacts of the referenced  
80 update. Finally, I added the new depreciation adjustment associated with  
81 the replacement of the Elster transponders that will be discussed in more  
82 detail later in this testimony.

83 **Q. HAVE YOU PREPARED ANY EXHIBITS IN SUPPORT OF YOUR**  
84 **SURREBUTTAL TESTIMONY?**

85 A. Yes. I have prepared Exhibits OCS 2.1S through 2.7S, which are  
86 attached to this testimony. Exhibit OCS 2.1S presents the overall revenue

---

<sup>1</sup> The amount of expenses included in the test year for outside services used to assist the Company in its 2018 Application for Voluntary Resource Approval Decision was deemed confidential by the Company. As the impact of the removal on revenue requirement is provided in the confidential version of my direct testimony, Exhibit OCS 2D, at page 5, it is not being repeated herein.

87 requirement resulting from the revisions to my original recommendations  
88 presented in this testimony. Exhibit OCS 2.2S presents a summary of  
89 each of the adjustments to revenues, expense and rate base presented in  
90 my direct testimony and in this surrebuttal testimony, by adjustment.  
91 Exhibit OCS 2.3S through 2.6S present the revisions recommended in this  
92 testimony as well as other supportive information. Also included with this  
93 testimony is Exhibit OCS 2.7S, which consist of responses to data  
94 requests referenced in this testimony that were not previously provided in  
95 OCS Exhibit 2.16D with my direct testimony.

96 **RATE BASE ADJUSTMENTS**

97 **Projected Plant In Service**

98 **Q. IN HIS REBUTTAL TESTIMONY, MR. STEPHENSON INDICATES THAT**  
99 **YOU AND DPU WITNESS ORTON RAISE GENERAL CONCERNS**  
100 **REGARDING THE 2020 CAPITAL EXPENDITURES BASED ON HIGH-**  
101 **LEVEL HISTORICAL EXPENDITURES AND THAT NEITHER OF YOU**  
102 **“RAISED ANY CONCERNS ABOUT THE INDIVIDUAL PROJECTS**  
103 **THAT MAKE UP THE 2020 CAPITAL BUDGET.”<sup>2</sup> HE ALSO**  
104 **INDICATES THAT THE YOUR PROPOSED ADJUSTMENTS TO THE**  
105 **2020 CAPITAL EXPENDITURES “DO NOT ASSESS ANY OF THE**

---

<sup>2</sup> DEU Exhibit 3.0R (Rebuttal Testimony of Jordan K. Stephenson) at page 3, lines 57 – 61.

106 **INDIVIDUAL PROJECTS” AND SHOULD BE DENIED.<sup>3</sup> DO YOU WISH**  
107 **TO COMMENT ON THIS ASSERTION?**

108 A. Yes. It is not clear to me how the individual projects could have been  
109 reviewed prior to my direct testimony being filed on October 17, 2019  
110 when the Company did not provide the breakdown of the budgeted  
111 amounts by individual projects until its November 14, 2019 rebuttal filing.  
112 As indicated in my direct testimony, the Company’s initial filing contained  
113 very little detail regarding the projected 2020 capital expenditures. DEU’s  
114 response to OCS Data Request 4.21, which asked for the 2020 capital  
115 expenditures budget “in the most detailed format available,” indicated that  
116 the capital budget provided with the initial filing as part of the response to  
117 MDR B.04 was “...the most detailed 2020 budget currently available.”<sup>4</sup>  
118 The response to OCS Data Request 4.21 was provided by DEU on  
119 September 6, 2019 and did not include an itemization of individual projects  
120 making up the 2020 capital budget. The itemization of the individual  
121 projects making up the 2020 capital budget of approximately \$278.8  
122 million was not provided until DEU Exhibit 3.1R was filed with the  
123 Company’s rebuttal testimony on November 14, 2019.

124 While Mr. Stephenson complains that I did not raise concerns with  
125 the individual projections making up the 2020 capital budget, the

---

<sup>3</sup> *Id.* at page 3, lines 66 – 68.

<sup>4</sup> The information provided in the single page of support with the Company’s initial filing for the 2020 capital expenditures in response to MDR B.04 and the response to OCS 4.21 are included OCS Exhibit 2.16D.

126 Company did not provide an itemization of those individual projects until  
127 well after my direct testimony was filed, despite the OCS asking for the  
128 2020 capital expenditures budget in the most detailed format available  
129 when OCS Data Request 4.21 was submitted to the Company on August  
130 23, 2019. In fact, the Company's response to OCS Data Request  
131 10.02(b), submitted on November 25, 2019, indicated that at the time OCS  
132 Data Request 4.21 was issued it had "a preliminary list of projects for 2020  
133 that had not yet been finalized and as such were not included in its  
134 response to the data request."

135 The response to OCS Data Request 10.02(b) also indicated that  
136 the responses to DPU Data Requests 10.3, 10.4 and 10.7 identified "some  
137 of the projects that were included on the preliminary list prior to  
138 finalization." While the Company did provide additional information on  
139 some of the forecasted 2020 capital cost areas and projects in response  
140 to DPU Data Requests 10.03, 10.04 and 10.07, each of which were  
141 provided on September 5, 2019, the amounts identified in those  
142 responses for many of the projects and categories differ from the amounts  
143 presented for the same projects and categories in the individual project  
144 listing contained in DEU Exhibit 3.1R. For example, the response to DPU  
145 Data Request 10.03 identified the 2020 projected capital expenditures for  
146 the Southern System Expansion project as \$20.0 million, the response to  
147 DPU Data Request 10.07 identified the amount for the project as \$21.0

148 million and the DEU Exhibit 3.1R identifies the 2020 capital budget for the  
149 Southern System Expansion project as \$19.0 million.

150 **Q. ARE THERE SIGNIFICANT VARIANCES IN THE INFORMATION THE**  
151 **COMPANY PREVIOUSLY PROVIDED FOR THE 2020 CAPITAL**  
152 **EXPENDITURES AND THE AMOUNTS PROVIDED WITH ITS**  
153 **REBUTTAL FILING?**

154 A. Yes. DPU Data Request 7.04, which was responded to on September 3,  
155 2019, asked the Company to provide the proposed 2020 capital  
156 expenditures by the categories shown in the Merger Integration Reports.  
157 In response, the Company provided a breakdown of its 2020 capital  
158 budget contained in its original filing of \$277.7 million by function. The  
159 table below provides a side-by-side comparison of the breakdown by  
160 function of the 2020 capital budget amounts provided by the Company in  
161 response to DPU Data Request 7.04 on September 3, 2019 to the 2020  
162 capital expenditure budget provided in DEU Exhibit 3.1R on November 15,  
163 2019.

164

Class/Function	2020 Capital Budget per Response to DPU 7.04	2020 Capital Budget per DEU Exh. 3.1R	\$ Change by Class /Function	% Change by Class /Function

165

166

167

168

169

170

171

172

173

174

175

As shown in the above table, the 2020 capital expenditures broken down by function has changed significantly between the amount provided previously in response to discovery and the amount presented in the Company's rebuttal filing. Given the extent of the differences, this leads one to question if the Company was targeting a specific dollar amount in the capital budgeting process for 2020 and modified the budgets to fit a specified dollar amount or range.

**Q. COULD YOU PLEASE BRIEFLY SUMMARIZE THE RECOMMENDATION MADE IN YOUR DIRECT TESTIMONY WITH REGARDS TO DEU'S BUDGETED 2020 CAPITAL EXPENDITURES?**

176 A. Yes. In my direct testimony, I indicated that the Company's filing included  
177 a substantial increase in the annual capital expenditures for 2020, going  
178 from \$212.2 million actual capital expenditures in 2018 to \$232.4 million  
179 budgeted in 2019 and \$277.7 million forecasted for 2020.<sup>5</sup> It was my  
180 opinion that the Company did not provide a robust level of support for the  
181 substantial forecasted increase in capital expenditures. While I did not  
182 challenge the \$20.2 million increase for 2019 as compared to 2018  
183 actuals, I did challenge the substantial increase in 2020 forecasted capital  
184 expenditures due largely to the fact that the Company provided very little  
185 support for the 2020 forecasted capital expenditures.

186 Since the Company had not provided a reasonable level of support  
187 or justification for the forecasted 2020 capital expenditures, I  
188 recommended that the forecasted 2020 capital expenditures be reduced  
189 by \$45.3 million to the budgeted 2019 capital expenditure level of  
190 \$232,357,000. Since not all of the 2020 capital expenditures are projected  
191 by DEU to be placed into service during 2020, and the test year is based  
192 on average 2020 rate base, reducing the forecasted 2020 capital  
193 expenditures in DEU's rate case model by \$45.3 million resulted in a  
194 \$13,254,496 reduction to the 2020 future test year rate base.<sup>6</sup>

195 **Q. TO WHAT DOES THE COMPANY ATTRIBUTE THE SIGNIFICANT**  
196 **INCREASE IN CAPITAL EXPENDITURES FOR 2020?**

---

<sup>5</sup> OCS Exhibit 2D (Direct Testimony of Donna Ramas) at p. 8, lines 153 – 161.

<sup>6</sup> *Id.* at page 11, lines 218 – 221 and Exhibit OCS 2.5D.

197 A. Mr. Stephenson indicates that the \$45 million increase between the 2019  
198 and 2020 capital budgets are due largely to a \$10 million proposed  
199 increase in the Infrastructure Tracker, \$14 million for a new gate station on  
200 the Kern River pipeline and \$19 million for a Southern System expansion  
201 to the St. George area.

202 **Q. DOES THE COMPANY'S REBUTTAL TESTIMONY AND THE**  
203 **ITEMIZATION OF THE 2020 CAPITAL BUDGET BY PROJECT CAUSE**  
204 **YOU TO CHANGE YOUR RECOMMENDATION?**

205 A. No, it does not. It is my opinion that the Company has provided too little  
206 information much too late to support the substantial budgeted increase in  
207 capital expenditures contained in its filing. The burden of proof is on the  
208 Company to support its test year request. In DEU's initial filing, and in  
209 response to discovery issued in this proceeding by both the OCS and  
210 DPU prior to the filing of DEU's rebuttal testimony on November 14, 2019,  
211 the Company provided very little information in support of its forecasted  
212 2020 capital expenditures. As background, and as pointed out in my  
213 direct testimony, the capital expenditures went from actual amounts of  
214 \$210.7 million in 2017 and \$212.2 million in 2018 to \$232.4 million  
215 budgeted in 2019 and \$277.7 million forecasted for 2020. While Mr.  
216 Stephenson discussed three areas explaining \$43 million of increase  
217 between the 2019 budget and 2020 budget, the 2020 capital forecast  
218 contained in the Company's initial filing is \$65.5 million higher than the

219 actual 2018 capital expenditures and \$67 million higher than the actual  
220 2017 capital expenditures.

221 Additionally, as pointed out previously in this testimony, the costs  
222 that make up the significant 2020 capital expenditures contained in the  
223 Company's filing by function have changed significantly between the time  
224 the Company originally filed its testimony and responded to discovery  
225 addressing the 2020 forecasted capital expenditures in September 2019  
226 and the November 14, 2019 rebuttal filing. For example, the table  
227 presented previously in this testimony demonstrates that the 2020 capital  
228 expenditures presented by the Company increased by \$31.7 million for  
229 Feeder Lines, decreased by \$49.3 million for Distribution Meters – New,  
230 increased by \$4.47 million for Transportation Equipment and \$4.6 million  
231 for Tools and Work Equipment, and declined by \$17.7 million for  
232 Distribution mains. Given the Company's failure to provide a reasonable  
233 level of support for the significant projected increase in expenditures in a  
234 timely and useful manner, and the significant changes in the costs  
235 presented during this case, I continue to recommend the adjustment  
236 presented in my direct testimony.

237

238 **Transponder Retirements – Accumulated Depreciation**

239 **Q. BEFORE DISCUSSING THE RETIREMENT AND REMOVAL OF THE**  
240 **ELSTER TRANSPONDERS, CAN YOU PLEASE FIRST DESCRIBE**  
241 **HOW PROCEEDS AND DISMANTLEMENT COSTS INCURRED AS**

242 **PART OF RETIRING ASSETS IMPACT ACCUMULATED**

243 **DEPRECIATION AND RATE BASE?**

244 A. Yes. As background and in general terms, when an asset is retired from a  
245 Company's books, both plant in service and accumulated depreciation are  
246 reduced by the original cost of the asset. As a general example, if an  
247 asset that originally cost \$10 is retired from service, both plant in service  
248 and accumulated depreciation are reduced by \$10. In my direct  
249 testimony, at lines 228 – 235, I discussed how proceeds and dismantling  
250 costs realized when an asset being retired is removed from service also  
251 impact the accumulated depreciation balance.

252 If dismantling costs are incurred when an asset is retired and  
253 removed from service, the dismantling costs are booked as a reduction to  
254 accumulated depreciation. Since accumulated depreciation reduces rate  
255 base, the dismantling costs effectively increase rate base. If proceeds are  
256 received as a result of the retired asset being sold, the proceeds are  
257 booked as an increase in the accumulated depreciation balance thereby  
258 reducing rate base.

259 When depreciation rates are set, projected proceeds and  
260 dismantling costs are some of the factors considered in determining the  
261 depreciation rate that is then applied to the plant balance over the  
262 depreciable life of the plant.

263 **Q. COULD YOU PLEASE BRIEFLY SUMMARIZE THE**  
264 **RECOMMENDATION IN YOUR DIRECT TESTIMONY REGARDING**

265           **THE COMPANY'S ESTIMATE OF PROCEEDS AND DISMANTLEMENT**  
266           **COSTS USED IN FORECASTING THE 2020 TEST YEAR**  
267           **ACCUMULATED DEPRECIATION BALANCE?**

268    A.    Yes. I explained that the Company's method of estimating the amount of  
269           proceeds and dismantlement costs using historic three-year average  
270           ratios of proceeds to plant retirements and dismantling costs to plant  
271           retirements could be a reasonable approach in many circumstances.  
272           However, I pointed out that this approach, based on historic averages,  
273           was not appropriate in the current case unless adjusted due to issues  
274           caused by the Company's accounting for the early retirement and  
275           replacement of Elster transponders.

276                    In my direct testimony, I recommended that the Company's  
277           calculation methodology used to forecast the 2019 and 2020 proceeds  
278           and dismantlement costs be revised to remove the impacts of the  
279           transponder retirements on both the historic three-year average ratios  
280           applied by the Company and on the forecasted 2019 and 2020 plant  
281           retirements to which the ratios were applied. This removed the  
282           overstatement of the forecasted 2019 and 2020 proceeds caused by the  
283           Company's accounting for the Elster transponders. The revisions made to  
284           the Company's proceeds and dismantling cost calculations were  
285           presented in Exhibit OCS 2.6D with my direct testimony, resulting in a  
286           recommended increase in the average 2020 test year accumulated  
287           depreciation balance of \$3,608,652.

288 **Q. DID THE COMPANY REBUT YOUR RECOMMENDATION?**

289 A. Yes, it did. The Company's rebuttal, coupled with the Company's  
290 responses to several data requests directed to the rebuttal filing, caused  
291 me to realize that the Company's accounting for the removal of the Elster  
292 transponders and the resulting impacts on the Company's filing were even  
293 more problematic than I realized at the time my direct testimony was filed.

294 **Q. PLEASE EXPLAIN.**

295 A. At the time my direct testimony was filed, I was already aware of several  
296 problems with the Company's accounting for the retirement and  
297 replacement of the Elster transponders. Based on information provided in  
298 the recent depreciation docket, Docket No. 19-057-03, the Company  
299 replaced 261,643 Elster transponders during 2018. Due to issues caused  
300 by the Company's implementation of a new fixed asset accounting system  
301 during 2018, the Elster transponders replaced during 2018 were not  
302 retired on the Company's books during 2018. In response to OCS Data  
303 Request 4.24 in this docket, the Company indicated that the retirement of  
304 the Elster transponders that were replaced during 2018 will be booked in  
305 2019. In reviewing the Company's filing, I confirmed that the impact of the  
306 retirements associated with the 2018 replacement of Elster transponders  
307 on plant in service and accumulated depreciation were included in the  
308 2019 forecast period in the Company's rate case model. Additionally, as  
309 pointed out in my direct testimony at lines 260 – 274, I was aware that the  
310 Company recorded no dismantling costs to accumulated depreciation

311 associated with the retirement and replacement of the Elster transponders  
312 on its books during the period they were being replaced.

313 **Q. WHAT ADDITIONAL PROBLEMS WITH THE COMPANY'S**  
314 **ACCOUNTING FOR THE REMOVAL OF THE ELSTER**  
315 **TRANSPONDERS DID YOU BECOME AWARE OF AFTER REVIEWING**  
316 **DEU'S REBUTTAL TESTIMONY?**

317 A. In his rebuttal testimony, at lines 81 – 85, Mr. Stephenson indicates that  
318 the Company has determined that “approximately 9.09% of the costs to  
319 replace transponders are related to dismantling the existing transponders”  
320 and that DEU “will record dismantling costs related to transponder  
321 replacements from 2016-2019 in 2019.” At lines 96 – 97 of his rebuttal  
322 testimony, Mr. Stephenson references DEU Exhibit 3.2R and states that  
323 “...the Company will book \$4.71 million of dismantling cost in 2019 related  
324 to the transponder replacement work.” He indicates that, based on this  
325 information, DEU does not believe it is appropriate to adjust the  
326 accumulated depreciation balance related to transponder costs as DEU  
327 believes that “...its original approach of estimating system total proceeds  
328 and dismantling costs using a three-year average ratio to total system  
329 retirements is reasonable.”<sup>7</sup>

330 When the 2016 to 2019 dismantling costs were being incurred by  
331 the Company, the actual costs would have been recorded somewhere on

---

<sup>7</sup> DEU Exhibit 3.0R (Rebuttal Testimony of Jordan K. Stephenson), page 5, lines 105 – 108.

332 the Company's books and records when incurred. When asked where the  
333 dismantling costs incurred from 2016 to 2018 was recorded on DEU's  
334 books in OCS Data Request 10.05, the Company indicated that they were  
335 booked to the 107 account, which is Construction Work in Progress. In  
336 response to OCS Data Request 10.07, the Company agreed that the  
337 dismantling costs were booked to Construction Work in Progress and  
338 Plant in Service accounts. As a result, the dismantling costs are included  
339 in the plant in service balances in the test year. The problems with the  
340 Company's accounting for the replacement of the Elster transponders has  
341 caused the plant in service balances to be overstated due to the inclusion  
342 of the costs of dismantling the transponders being replaced as part of the  
343 cost of the replacement transponders on the Company's books and  
344 records during 2016 through 2019.

345 **Q. DOES THIS CAUSE A DOUBLE-COUNTING OF THE COSTS OF**  
346 **DISMANTLING THE ELSTER TRANSPONDERS IN THE COMPANY'S**  
347 **FILING?**

348 A. Yes. As indicated above, DEU does not believe it is appropriate to adjust  
349 the accumulated depreciation balance related to transponder costs using  
350 the method I recommended. Rather, Mr. Stephenson states on lines 107  
351 – 108 of his rebuttal testimony that: "The Company believes that its  
352 original approach of estimating system total proceeds and dismantling  
353 costs using a three-year average ratio to total system retirements is  
354 reasonable." Thus, it is the Company's view that the dismantlement costs

355 associated with the removal of the Elster transponders are adequately  
356 covered in its dismantlement cost estimates contained in determining the  
357 forecasted 2020 accumulated depreciation balances.

358           However, the Company has acknowledged in response to OCS  
359 Data Requests 10.05 and 10.07 that the dismantling costs incurred from  
360 2016 to 2019 are included in the plant in service balances. Mr.  
361 Stephenson's rebuttal testimony at lines 96 – 97 and DEU Exhibit 3.2R  
362 show that that Company has estimated the amount of dismantlement  
363 costs that were booked as part of the cost of the new replacement  
364 transponders for 2016 through 2019 was \$4.71 million. Thus, the  
365 dismantling costs are included in the Company's filing both in the  
366 adjustment to accumulated depreciation for dismantling costs AND in plant  
367 in service as part of the balances included for the replacement  
368 transponders.

369           The Company acknowledges that there is a double-count. OCS  
370 Data Request 10.07(b) asks if the Company "...agrees that the amounts  
371 booked to plant in service for the new transponders should be reduced by  
372 the dismantling costs associated with removing the old transponders to  
373 avoid a double-counting of the costs in the Company's filing since the  
374 dismantling costs are being considered in the Company's dismantling cost  
375 factor in the filing?" The Company's response stated: "The Company  
376 agrees and anticipates making an adjustment to the 108 (Accumulated  
377 Depreciation) and the 101 (Plant in Service) balances."

378 **Q. BASED ON THE ADDITIONAL INFORMATION PROVIDED BY THE**  
379 **COMPANY IN ITS REBUTTAL FILING AND IN RESPONSE TO**  
380 **SUBSEQUENT DATA REQUESTS, HOW DO YOU RECOMMEND THE**  
381 **DOUBLE-COUNTING OF THE ELSTER TRANSPONDER**  
382 **DISMANTLEMENT COSTS IN THE COMPANY'S FILING BE**  
383 **CORRECTED?**

384 A. Just to be abundantly clear, the dismantling costs associated with  
385 removing the Elster transponders are included both in plant in service as  
386 part of the cost of the replacement transponders and as part of the  
387 Company's dismantlement adjustment used in determining the forecasted  
388 accumulated depreciation balance. The key is to ensure that these costs  
389 are not included twice in rate base in determining the revenue  
390 requirements.

391 The transponder retirement adjustment presented in my direct  
392 testimony and in Exhibit OCS 2.6D attached thereto would effectively  
393 remove the dismantling costs associated with transponders from  
394 accumulated depreciation, increasing accumulated depreciation and  
395 thereby reducing rate base by approximately \$3.6 million. It is my opinion  
396 that adoption of this adjustment would be a reasonable means to ensure  
397 there is not a double-counting of the costs.

398 As an alternative, instead of adopting my recommended adjustment  
399 to the accumulated depreciation balance, the Commission could reduce  
400 plant in service by the \$4.7 million of dismantlement costs estimated by

401 Mr. Stephenson as being included as part of the cost of the new  
402 transponders booked by the Company from 2016 through 2019. However,  
403 as part of that \$4.7 million would have been depreciated by the Company  
404 between 2016 and the test year, the actual amount included in rate base  
405 in the Company's filing as part of the cost of the replacement transponders  
406 would be lower than the full \$4.7 million due to the impacts of the  
407 depreciation of the replacement transponders on the accumulated  
408 depreciation balance. While the Company acknowledged in response to  
409 OCS Data Request 10.07 that it anticipated making an adjustment to both  
410 the plant in service and accumulated depreciation balances as a result of  
411 the double count, it did not provide the anticipated adjustment.

412 **Q. ARE THERE ANY ADDITIONAL ADJUSTMENTS THAT NEED TO BE**  
413 **MADE AS A RESULT OF THE COMPANY INCORRECTLY BOOKING**  
414 **THE ELSTER TRANSPONDER DISMANTLING COSTS AS PART OF**  
415 **THE COST OF THE REPLACEMENT TRANSPONDERS?**

416 A. Yes. The dismantling costs are included in the plant in service balance in  
417 Account 381.21 as part of the cost of the replacement transponders in the  
418 Company's filing. In the filing, the Company applied the depreciation rate  
419 for Account 381.21 of 3.53% to these costs. As the dismantling costs for  
420 the removal of the Elster transponders should not have been booked as  
421 part of the costs of the new transponders in plant in service, the  
422 depreciation expense associated with the dismantling costs included in the  
423 filing should be removed.

424 **Q. WHAT ADJUSTMENT SHOULD BE MADE TO THE 2020 TEST YEAR**  
425 **DEPRECIATION EXPENSE TO REMOVE THE IMPACTS OF THE**  
426 **DISMANTLING COSTS?**

427 A. Based on the \$4.71 million of dismantling costs for the period 2016  
428 through 2019 identified in Mr. Stephenson's rebuttal testimony, and the  
429 3.53% depreciation rate applied to those costs in DEU's filing,  
430 depreciation expense should be reduced by \$166,263 (\$4.71 million x  
431 3.53%). This adjustment is presented in Exhibit OCS 2.3S.

432 **Cash Working Capital**

433 **Q. CAN YOU PLEASE SUMMARIZE THE ADJUSTMENTS TO THE**  
434 **COMPANY'S LEAD-LAG STUDY RECOMMENDED IN YOUR DIRECT**  
435 **TESTIMONY?**

436 A. Yes. I recommended that: 1) the Federal and state income taxes be  
437 removed from the lead lag study; and 2) depreciation and deferred income  
438 taxes be removed from the lead lag study. The result of these revisions  
439 reduced the net lag days from the 7.358 days proposed in DEU's initial  
440 filing to -0.785 days. This resulted in a recommended cash working  
441 capital of (\$1,473,764) on a Utah jurisdictional basis.

442 **Q. WHAT ADJUSTMENTS TO THE LEAD-LAG STUDY WERE**  
443 **RECOMMENDED BY THE DPU?**

444 A. DPU witness David Thomson recommended four adjustments to DEU's  
445 lead-lag study, which were summarized in DPU Exhibit 4.8DIR. These  
446 four adjustments included: 1) a correction to DEU's calculation to include

447 the depreciation and deferred income tax amounts in the Total Expense  
448 lag amounts; 2) a correction to change the sign for the depreciation and  
449 deferred income tax lag amounts from negative to positive; 3) an  
450 adjustment to delete the pension plan amounts from the payroll and  
451 payroll overhead lag day calculations; and 4) removal of Federal and state  
452 income taxes from the lead-lag study. The result of the DPU  
453 recommended revisions reduced the net lag days from the 7.358 days  
454 proposed in DEU's initial filing to -0.828 days.

455 **Q. DID THE COMPANY AGREE TO CHANGE THE LEAD-LAG DAYS IN**  
456 **ITS REBUTTAL FILING?**

457 A. Yes. Mr. Stephenson agreed in his rebuttal testimony that the lead-lag  
458 days should be adjusted, stating that "The Company accepts the -0.898  
459 factor proposed by Mr. Thomson." While the testimony references a factor  
460 of -0.898, the revised rate case model provided with Mr. Stephenson's  
461 rebuttal testimony as DEU Exhibit 3.10R incorporated a lead-lag factor of  
462 -0.828 days, consistent with DPU witness Thomson's recommendation.  
463 Mr. Stephenson's rebuttal testimony, at page 5, lines 117 – 118, indicates  
464 that the change reduces revenue requirement by \$1.497 million. At lines  
465 116 – 117, Mr. Stephenson states: "I believe this factor also addresses  
466 the concerns raised by Ms. Ramas as well."

467 **Q. IS IT CORRECT THAT THE COMPANY'S ACCEPTANCE OF THE**  
468 **LEAD-LAG FACTOR PROPOSED BY DPU WITNESS THOMSON**

469 **ADDRESSES THE CONCERNS RAISED IN YOUR DIRECT**  
470 **TESTIMONY?**

471 A. No, not entirely. It does address my recommendation that the Federal and  
472 state income taxes be removed from the lead lag study. However, Mr.  
473 Thomson's revisions to DEU's lead-lag study included two corrections to  
474 the depreciation and deferred income tax amounts incorporated by the  
475 Company in its study. Mr. Thomson's calculations include the  
476 depreciation and deferred income tax expenses, as corrected for errors  
477 made by DEU, in calculating the net lag days.

478 As discussed in my direct testimony, at lines 462 – 531,  
479 depreciation expense and deferred income tax expense should not be  
480 included in the calculation of the net lag days. Depreciation and deferred  
481 income taxes do not result in day-to-day cash outflow and are not  
482 representative of the Company's cash working capital needs. The  
483 Company's attempt to include depreciation expense in the cash working  
484 capital calculation is also inconsistent with long-standing Commission  
485 policy.

486 **Q. WHAT NET LAG DAYS WOULD RESULT IF MR. THOMSON'S LEAD-**  
487 **LAG DAY CALCULATIONS ARE REVISED TO REMOVE THE**  
488 **DEPRECIATION EXPENSE AND DEFERRED INCOME TAX EXPENSE?**

489 A. On OCS Exhibit 2.4S, I provide a side-by-side comparison of the net lag  
490 day calculation presented in DPU Exhibit 4.1DIR to the calculation as  
491 revised to remove the "Depreciation and DIT Lag" category. As shown on

492 line 16 of OCS Exhibit 2.4S, the DPU recommended net lag days would  
493 go from -0.828 days to -0.905 days if the depreciation expense and  
494 deferred income tax expense are removed.

495 The DPU recommended net lag days are lower than the -.0785  
496 days recommended in my testimony due to Mr. Thomson's recommended  
497 revision to the payroll & payroll overhead lag. However, whether or not  
498 depreciation and deferred income taxes are allowed to be included in  
499 determining cash working capital is an important policy decision that  
500 should not be ignored. If the Commission adopts Mr. Thomson's  
501 recommended lead-lag adjustments instead of my proposed revisions,  
502 then I strongly recommend that the depreciation and deferred income  
503 taxes be removed consistent with long-standing Commission policy. As  
504 indicated above, this would result in -0.905 lag days.

505 **NET OPERATING INCOME**

506 **Remove Non-Labor O&M Expense Escalation**

507 **Q. IN YOUR DIRECT TESTIMONY, YOU RECOMMENDED THAT THE**  
508 **COMPANY'S ADJUSTMENT TO INFLATE THE BASE YEAR NON-**  
509 **LABOR O&M EXPENSES SHOULD BE REMOVED. DID THE**  
510 **COMPANY AGREE WITH YOUR RECOMMENDATION?**

511 **A.** No, it did not. The Company did, however, indicate that the inflated O&M  
512 expenses included in its initial filing should be reduced by \$600,000 for

513 additional anticipated cost savings, resulting in a \$601,333 reduction to  
514 revenue requirement.<sup>8</sup>

515 **Q. HOW DOES THE \$600,000 OF ADDITIONAL COST SAVINGS**  
516 **INCORPORATED IN DEU'S REBUTTAL FILING COMPARE TO YOUR**  
517 **RECOMMENDATION TO REMOVE THE INFLATION OF THE BASE**  
518 **YEAR NON-LABOR O&M EXPENSE?**

519 A. As indicated in my direct testimony, removal of the inflation factors from  
520 DEU's filing reduced the adjusted 2020 test year non-labor O&M  
521 expenses by \$2,598,950 prior to consideration of the impact of the  
522 inflation removal on other adjustments contained in DEU's filing and rate  
523 case model. Overall, when the impact on DEU's adjustments are  
524 considered, the removal of the non-labor O&M expense inflation factors  
525 from DEU's revenue requirement model resulted in a reduction to DEU's  
526 requested revenue requirements of \$1,934,618. This revenue  
527 requirement impact is approximately \$1.3 million greater than the impact  
528 of the additional \$600,000 reduction to test year O&M expense reflected in  
529 DEU's rebuttal filing.

530 **Q. AFTER REVIEWING THE REBUTTAL TESTIMONY FILED BY DEU, DO**  
531 **YOU CONTINUE TO RECOMMEND THAT THE NON-LABOR O&M**  
532 **INFLATION FACTORS BE REMOVED FROM THE RATE CASE**  
533 **MODEL?**

---

<sup>8</sup> DEU Exhibit 3.0R (Rebuttal Testimony of Jordan K. Stephenson), page 9, lines 219 – 226.

534 A. Yes, I do. As indicated in my direct testimony, whether or not inflation  
535 should be applied to base year non-labor O&M expenses should be  
536 considered on a case-by-case basis based on the facts and  
537 circumstances in each rate case.

538 If the Commission does not adopt my recommendation that the  
539 non-labor O&M inflation factors be removed from the rate case model in  
540 this case, then I would agree that an adjustment should be made to reflect  
541 the additional \$600,000 reduction to test year O&M expense presented in  
542 DEU's rebuttal filing. I am not advocating that both adjustments be made.

543 **Q. DO YOU WISH TO ADDRESS ANY OF THE ASSERTIONS MADE BY**  
544 **DEU WITNESS STEPHENSON IN REBUTTING YOUR**  
545 **RECOMMENDATION THAT THE NON-LABOR O&M INFLATION BE**  
546 **REMOVED?**

547 A. Yes, there are several statements made in Mr. Stephenson's rebuttal  
548 testimony on the inflation issue that I wish to address. First, Mr.  
549 Stephenson asserts that after the severance payments associated with  
550 the voluntary retirement program are removed, the actual expenses for the  
551 first six months of 2019 are 2.21% higher than the actual expenses for the  
552 first six months of 2018. He states that "The Company believes this  
553 serves as evidence that the expense forecast methodologies in this case  
554 are reasonable and properly capture anticipated labor expenses."<sup>9</sup>  
555 However, the expenses used in Mr. Stephenson's comparison include the

---

<sup>9</sup> *Id.* at page 8, lines 197 - 206

556 energy efficiency program expenses. Since the energy efficiency program  
557 expenses are not collected through the distribution non-gas rates, the  
558 costs are not included in the revenue requirements in this case.

559 The attachment provided with DEU's response to OCS Data  
560 Request 10.14 shows that when the energy efficiency program expenses  
561 are also removed from DEU's analysis, the O&M expenses incurred in the  
562 first six months of 2019 are actually 1.65% lower than the expenses for  
563 the first half of 2018. In other words, DEU's claimed 2.21% increase in  
564 O&M expenses is really a decrease of 1.65% when the energy efficiency  
565 program expenses are removed. If anything, the analysis presented by  
566 Mr. Stephenson, once corrected to remove the energy efficiency  
567 expenditures, further supports my recommendation that the inflation  
568 factors applied by DEU to the 2018 base year non-labor O&M expense be  
569 removed.

570 **Q. IN ADDRESSING THE COMPARISONS MADE BY YOU AND MR.**  
571 **HIGGINS OF THE COMPANY'S 2020 BUDGET TO THE 2020 TEST**  
572 **PERIOD, MR. STEPHENSON REFERENCES A COST SAVINGS**  
573 **INITIATIVE. WHAT DOES MR. STEPHENSON SAY REGARDING THE**  
574 **COST SAVINGS INITIATIVE?**

575 A. Mr. Stephen states: "When the 2020 budget was prepared in the third  
576 quarter of 2018, a cost savings initiative was being conducted by a third-  
577 party consulting firm." He also states: "At the time, the firm had presented  
578 estimates of large potential savings to Dominion Energy related to all

579 subsidiaries nationwide” and that the “estimated cost savings were  
580 allocated down to each business unit’s budgets.”<sup>10</sup> While Mr. Stephenson  
581 indicates that the cost savings initiative was being conducted during the  
582 third quarter of 2018 when the 2020 budget was being prepared, this  
583 assertion may not be accurate. In response to OCS Data Request  
584 10.17(b), the Company states that the third-party consulting firm did not  
585 perform the work on the cost savings initiative until 2019 and that no  
586 expenses were incurred by the Company during 2018 for the third-party  
587 cost savings initiative work. If the referenced third party consulting firm did  
588 not perform cost savings initiative work until 2019, it is not clear how the  
589 estimated savings from that initiative could have been included in DEU’s  
590 2020 budget that was prepared in the third quarter of 2018.

591 **Q. DO YOU HAVE ANY OTHER CONCERNS WITH THE COMPANY’S**  
592 **REBUTTAL TESTIMONY ON THE INFLATION ISSUE?**

593 A. Yes. My direct testimony indicated that the 2020 O&M budget provided by  
594 the Company with the master data responses, which were filed in July  
595 2019, included O&M expenses of \$142.4 million. My testimony also  
596 indicated that an updated 2020 budget provided by the Company included  
597 O&M expenses of \$131.7 million.<sup>11</sup> This updated budget was provided by  
598 the Company in response to OCS Data Request 4.06<sup>12</sup> on September 6,  
599 2019. In his rebuttal testimony, Mr. Stephenson indicates that the

---

<sup>10</sup> *Id.* at page 9, lines 207 - 213.

<sup>11</sup> OCS Exhibit 2D (Direct Testimony of Donna Ramas), page 30, lines 638 – 645.

<sup>12</sup> Response to OCS Data Request 4.06 previously provided in OCS Exhibit 2.16D.

600 Company has now prepared an updated 2020 budget during the fourth  
601 quarter of this year that includes \$151.6 million in total O&M expense.

602 OCS Data Request 10.13 asked the Company to: "Please explain,  
603 in detail, what specific factors caused the budgeted 2020 O&M expense to  
604 increase by approximately \$20 million between the 2020 budget provided  
605 in this case on September 6, 2019 and the 2020 budget referenced in the  
606 rebuttal filing." The Company responded as follows:

607 The difference between the \$131.7 million and the \$151.6 million is  
608 approximately \$20 million. About half of this difference is made up  
609 of higher insurance, corporate, salary, pension & benefits, contracted  
610 labor, IT related, and outside service costs. The other half is  
611 primarily from a refinement of expected O&M savings.  
612

613 Given the reductions in O&M expense in recent years, the large swings in  
614 each of the versions of the 2020 budget provided by the Company in this  
615 case, and the actual reduction in O&M expenses for the first half of 2019  
616 as compared to the first half of 2018 when the severance and energy  
617 efficiency costs are removed, I continue to recommend that inflation not be  
618 applied to the 2018 base year non-labor O&M expenses in this case.

619 **Remove Over-Accrual of Audit Fees**

620 **Q. CAN YOU PLEASE BRIEFLY DESCRIBE THE ADJUSTMENT IN YOUR**  
621 **DIRECT TESTIMONY TO REMOVE AN OVER-ACCRUAL OF AUDIT**  
622 **FEES?**

623 **A.** Yes. The external audit fees the Company accrued on its books during  
624 the base year included \$673,367 for an estimate of allocation to DEU of

625 the costs for the Dominion Energy, Inc. integrated audit. As explained on  
626 lines 972 – 984 of my direct testimony, it was subsequently decided that  
627 the fees for the Dominion Energy, Inc. integrated audit would not be  
628 charged to DEU and instead would only be charged to the various  
629 Dominion registrant companies. The Company indicated in response to  
630 discovery that the \$673,367 would be credited back to DEU in September  
631 2019. Since DEU is not being allocated the costs associated with the  
632 Dominion Energy, Inc. Integrated Audit, I recommended that the  
633 associated expenses be removed, reducing test year expenses by  
634 \$673,367 (\$650,308 Utah) if DEU's proposed inflation of base year costs  
635 is removed, or by \$704,695 (\$680,564 Utah) if the Commission agrees  
636 with DEU's application of the inflation factors.

637 **Q. DID THE COMPANY AGREE THIS ADJUSTMENT SHOULD BE MADE?**

638 A. Yes, the Company agreed that the \$673,367 should be removed from the  
639 base year.<sup>13</sup> However, in addressing the issues, Mr. Stephenson stated  
640 that the "Company has reviewed other accrual entries that occurred in  
641 2018 that were subsequently invoiced" and contends that "the 2018  
642 accruals were understated by \$369,031."<sup>14</sup> Thus, he reduces the  
643 adjustment to remove the costs associated with the Dominion Energy, Inc.  
644 integrated audit of \$673,367 by the \$369,031 amount he indicates the  
645 2018 accruals were understated, resulting in a net reduction to O&M

---

<sup>13</sup> DEU Exhibit 3.0R (Rebuttal Testimony of Jordan K. Stephenson), p. 11.

<sup>14</sup> *Ibid.*

646 expense of \$304,336 before inflation and \$309,626 after the application of  
647 inflation and state allocation.

648 **Q. DO YOU AGREE THAT THE COMPANY'S OFFSET TO YOUR**  
649 **ADJUSTMENT FOR THE UNDERSTATED ACCRUALS IS**  
650 **REASONABLE?**

651 A. No, I do not. The accrual for the Dominion Energy, Inc. integrated audit  
652 charges that will not be passed on to DEU, which DEU agreed should be  
653 removed, was booked to O&M expenses during the test year. The costs  
654 that the Company identified as being under-accrued during the test year  
655 were itemized on DEU Exhibit 3.6R, which identified 34 different charges  
656 with a description provided for each charge. A review of DEU Exhibit 3.6R  
657 shows that the net under-accruals that DEU proposes to use to reduce my  
658 recommended O&M expense adjustment are for costs that would be  
659 capitalized by the Company and not charged to expense. In fact, the  
660 Company's response to OCS Data Request 10.19 indicates that all of the  
661 costs presented on DEU Exhibit 3.6R were capitalized and are not O&M  
662 expenses. It is not reasonable or appropriate to reduce the agreed upon  
663 O&M expense adjustment for costs that will not be passed on to DEU by  
664 Dominion Energy, Inc. by costs that are ultimately capitalized as plant in  
665 service by the Company. Thus, I do not agree with the Company's  
666 proposal to increase O&M expenses for the net capital-related under-  
667 accruals identified on DEU Exhibit 3.6R. In fact, DEU's response to OCS  
668 Data Request 10.20 agreed that the amounts presented on DEU Exhibit

669 3.6R are capital and should not be included in O&M expense. Similarly,  
670 DEU's response to OCS Data Request 10.21 agrees that the capitalized  
671 costs should be removed from Mr. Stephenson's adjustment. Thus, the  
672 appropriate adjustment is the amount presented in my direct testimony,  
673 reducing test year expenses in DEU's original filing by \$\$673,367  
674 (\$650,308 Utah) or \$704,695 (\$680,564 Utah) if inflation is included.

675 **EDIT Amortization Updates**

676 **Q. COULD YOU PLEASE BRIEFLY DESCRIBE THE UPDATES MADE BY**  
677 **THE COMPANY TO ITS EDIT POSITION IN THE REBUTTAL FILING?**

678 A. Yes. The Company agreed with Mr. Higgins' recommendation that the  
679 amortization of the plant-related EDIT be reduced by \$826,000. This  
680 revision is based on a more recent actual plant-related EDIT amortization  
681 amount. The Company also agreed with a recommendation made by Mr.  
682 Higgins to revise rate base for a correction reflecting the 2018 EDIT  
683 amortization from January 2018 through June 2019. I am not opposing  
684 either of these revisions that were proposed by Mr. Higgins and agreed to  
685 by DEU.

686 The Company also changed its proposed amortization period for  
687 the non-plant related EDIT balances from the 30 year period contained in  
688 its original filing to 12 years. According to Mr. Stephenson's rebuttal  
689 testimony, at page 6, lines 29 – 131, the non-plant related EDIT balances  
690 are primarily associated with a pension asset that has a 12-year average

691 remaining service period, and the Company believes that a 12-year  
692 amortization “is most appropriate.”

693 **Q. DO YOU AGREE THAT A 12-YEAR AMORTIZATION PERIOD IS THE**  
694 **MOST APPROPRIATE PERIOD OVER WHICH THE NON-PLANT**  
695 **RELATED EDIT BALANCES SHOULD BE AMORTIZED AND**  
696 **RETURNED TO RATEPAYERS?**

697 A. No, I do not. Since the Company has proposed that the negative pension  
698 expense, or pension credit, be removed and excluded from O&M  
699 expenses in this case, it is not clear why it would be “most appropriate” in  
700 the Company’s opinion to amortization of the non-plant related EDIT  
701 balances owed to customers over a period that ties to the pension service  
702 period. As explained in my direct testimony, the EDIT balances are  
703 amounts that ratepayers have already paid to DEU prior to December 31,  
704 2017 for future income tax payments that will no longer be paid to the  
705 Federal government. Delaying the refund to ratepayers longer than  
706 necessary would exacerbate intergenerational equity issues.

707 As a reminder, the vast majority of the EDIT balance is plant-  
708 related and is being amortized to customers over a lengthy period in order  
709 to avoid violating the IRS normalization rules. The total EDIT balance as  
710 of December 31, 2017, inclusive of the associated tax gross-up, was  
711 \$244,677,102 on a Utah basis, and 94% of that amount, or \$230.1 million,  
712 pertains to plant-related EDIT that will be returned customers over many,  
713 many years. While the annual amortization of plant-related EDIT under

714 the Average Rate Assumption Method (ARAM) varies from year to year  
715 and increases in later years as the book to tax depreciation timing  
716 differences reverse, using the annual amortization rate of \$4,027,245  
717 shown for the plant related-EDIT amortization on DEU Exhibit 3.3R would  
718 result in a refund period of over 57 years (\$230,118,587 total / \$4,027,245  
719 amortization = 57.14 years). While the annual amortization of \$4,027,245  
720 will increase under the ARAM method in future years, it will still take many,  
721 many years before these amounts are fully returned to Utah ratepayers.

722 The non-plant related EDIT of \$14,558,102 on a Utah jurisdictional  
723 basis, inclusive of the associated tax gross-up, represents only 6% of the  
724 total EDIT balance owed to customers. It is my opinion that it is both fair  
725 and reasonable to return the ratepayer funded non-plant related EDIT  
726 balance back to ratepayers as soon as possible. Thus, I continue to  
727 recommend a five-year amortization period for the non-plant related EDIT  
728 balance.

729 **Q. IF THE COMMISSION DOES NOT AGREE WITH YOUR**  
730 **RECOMMENDED FIVE-YEAR AMORTIZATION PERIOD, IS THERE AN**  
731 **ALTERNATIVE AMORTIZATION PERIOD THAT YOU WOULD**  
732 **RECOMMEND FOR THE COMMISSION'S CONSIDERATION?**

733 A. Yes. It is my understanding that rate cases are filed every three years by  
734 DEU under the current Infrastructure Tracker requirements. As such, it is  
735 my opinion that either a three-year or a six-year amortization period in  
736 alignment with the rate case cycles would also be reasonable.

737 **Q. SINCE YOU ARE NOT OPPOSING THE REVISIONS TO THE PLANT-**  
738 **RELATED EDIT AMORTIZATION AND RATE BASE, HAVE YOU**  
739 **PREPARED A REVISED EDIT EXHIBIT?**

740 A. Yes. Exhibit OCS 2.5S replaces Exhibit OCS 2.14D provided with my  
741 original testimony. While Exhibit OCS 2.5S continues to reflect my  
742 recommended five-year amortization for the non-plant related EDIT  
743 balance, it replaces the plant-related EDIT rate base balance and  
744 amortization with amounts contained in DEU Exhibit 3.3R. As shown on  
745 Exhibit OCS 2.5S, my recommended 5 year amortization of the non-plant  
746 related EDIT balances increases the amortization proposed in DEU's  
747 rebuttal filing by \$1,698,492. It also increases rate base by \$536,808  
748 when compared to the amount contained in DEU's rebuttal filing.

749 **Q. ARE THERE ANY ADDITIONAL ISSUES YOU WISH TO ADDRESS**  
750 **WITH REGARDS TO THE PLANT-RELATED EDIT AMORTIZATION?**

751 A. Yes. I pointed out in my direct testimony that the actual amortization of  
752 the plant-related EDIT balance under the ARAM will vary annually. I  
753 recommended in my direct testimony that the difference between the  
754 annual amortization included in base rates as a result of this case and the  
755 actual annual amortization under the ARAM be deferred by the Company  
756 in a regulatory liability account to ensure that ratepayers receive the full  
757 amount of EDIT owed to them. The Company's rebuttal testimony was  
758 silent on this recommendation. To ensure that this issue does not "fall  
759 through the cracks" so to speak, I recommend that the Commission

760 explicitly make this a requirement as part of its Order in this proceeding. In  
761 the next rate case, parties could then address the appropriate amount of  
762 amortization to include in base rates for the plant-related EDIT and  
763 associated regulatory liability.

764 **LNG Facility Costs**

765 **Q. BOTH YOU AND UAE WITNESS KEVIN HIGGINS RECOMMENDED**  
766 **REMOVAL OF THE OUTSIDE CONTRACTOR COSTS CHARGED TO**  
767 **EXPENSE DURING THE 2018 BASE YEAR ASSOCIATED WITH THE**  
768 **2018 LNG DOCKET, DOCKET NO. 18-057-03. DID THE COMPANY**  
769 **AGREE WITH THIS RECOMMENDATION?**

770 A. No. Mr. Stephenson states that these are “all appropriate expenses  
771 related to approved activities in Utah” and that the Company “anticipates  
772 similar services will be required” going forward. He also indicates that  
773 there is “no reason to remove these costs from the test period.”<sup>15</sup>

774 **Q. DO YOU AGREE?**

775 A. No. The outside contractor costs incurred by the Company and charged  
776 to base year expenses for assistance in seeking approval of its decision to  
777 construct the LNG facility are not reflective of on-going regulatory costs  
778 that would be incurred on an annual basis by DEU. They are also not  
779 expenses that will be incurred in the 2020 test year. As explained at lines  
780 1320 – 1323 of my direct testimony: “While regulatory costs are incurred

---

<sup>15</sup> DEU Exhibit 3.0R (Rebuttal Testimony of Jordan K. Stephenson), page 12, lines 307 – 309.

781 from year to year, it is not likely that docketed as extensive as seeking  
782 approval of a voluntary resource decision will occur for DEU on an annual,  
783 on-going basis." I continue to recommend that these costs be removed  
784 from the test year.

785

786 **Pension Expense and Net Pension Asset**

787 **Q. COULD YOU PLEASE BRIEFLY SUMMARIZE THE POSITION**  
788 **PRESENTED IN YOUR DIRECT TESTIMONY REGARDING PENSION**  
789 **EXPENSE AND THE NET PENSION ASSET?**

790 A. Yes. Pension costs and the prepaid pension asset were addressed in my  
791 direct testimony at page 35 line 751 to page 44 line 964. I still firmly stand  
792 by that testimony in its entirety. As a brief summary, I strongly  
793 recommend that the Commission continue to recognize pension costs in  
794 rates based on the long-standing accrual method of accounting. This  
795 results in test year pension expense of -\$5,448,127. I also strongly  
796 recommend that the prepaid pension asset continue to be excluded from  
797 rate base. This is also consistent with long standing practice in Utah.

798 **Q. DID THE COMPANY AGREE WITH YOUR RECOMMENDATION?**

799 A. No. The rebuttal testimony of DEU witness Alan Felsenthal addressed  
800 pensions. Through Mr. Felsenthal's rebuttal testimony, DEU continued to  
801 recommend that the negative pension expense, or pension income, be  
802 excluded from the test year. As an alternative, Mr. Felsenthal  
803 recommended that both the negative pension expense be included as part

804 of net operating income and the prepaid pension asset be included as a  
805 component of rate base.

806 **Q. DID MR. FELSENTHAL'S REBUTTAL TESTIMONY CAUSE YOU TO**  
807 **CHANGE YOUR POSITION ON EITHER THE NEGATIVE PENSION**  
808 **EXPENSE OR THE NET PREPAID PENSION ASSET?**

809 A. No, absolutely not.

810 **Q. IS THERE ANYTHING IN MR. FELSENTHAL'S REBUTTAL**  
811 **TESTIMONY THAT YOU WISH TO ADDRESS?**

812 A. Yes, there are several statements and assertions in Mr. Felsenthal's  
813 rebuttal testimony that I will address in this testimony. Silence on any  
814 specific assertions made in Mr. Felsenthal's rebuttal testimony should not  
815 be construed as agreement with his or DEU's position.

816 **Q. IN HIS REBUTTAL TESTIMONY, MR. FELSENTHAL DISCUSSES**  
817 **SEVERAL FEDERAL ENERGY REGULATORY COMMISSION (FERC)**  
818 **CASES THAT ADDRESS PENSION COSTS. ARE THOSE CASES**  
819 **CONSISTENT WITH THE FACTS AND CIRCUMSTANCES IN THIS**  
820 **CASE?**

821 A. No, they are not. In his rebuttal testimony, Mr. Felsenthal discusses a  
822 1987 docket and a 1992 docket involving Williston Basin Interstate  
823 Pipeline Company. Based on his testimony, it appears that FERC  
824 disallowed the inclusion of positive pension expense in FERC authorized  
825 rates in periods in which the pension plan was fully funded and the  
826 company was not planning to make cash contributions to the pension

827 trust.<sup>16</sup> He also discusses a FERC case involving El Paso Natural Gas  
828 Company.<sup>17</sup> In its October 17, 2013 Order in that case, FERC disallowed  
829 the inclusion of positive pension expense in rates in a period in which the  
830 company was not making contributions to the pension plan assets. These  
831 cases differ from the current case in which DEU forecasts negative  
832 pension expense in the test year, not positive pension expense.

833 Additionally, I am not aware of the Utah Public Service Commission  
834 making the amount of pension expense included in rates contingent on the  
835 cash contribution to the pension plan. To the best of my knowledge, the  
836 Utah Public Service Commission has based the amount of pension  
837 expense included in rates on the accrual method of accounting in rate  
838 cases that have occurred since the accrual basis of accounting was  
839 implemented for pensions for financial reporting purposes, not the cash  
840 basis or a mix of accrual and cash basis.

841 **Q. ARE YOU AWARE OF ANY CASES IN WHICH FERC INCLUDED**  
842 **NEGATIVE PENSION EXPENSE AS A COMPONENT OF RATES?**

843 A. Yes. FERC's March 10, 2008 Order in Docket No. 08-129-000 indicates  
844 that pension income has been included as non-cash reductions to  
845 expense for the Southern Companies and the pension income (negative  
846 pension expense) was included as a component of their OATT formula  
847 rates. This order is being provided as Exhibit OCS 2.6S. In FERC Docket

---

<sup>16</sup> DEU Exhibit 6.0R (Rebuttal Testimony of Alan Felsenthal) at lines 101 – 113.

<sup>17</sup> *Id.* at lines 114 – 121.

848 No. 08-129-000, Southern Company Services, Inc. was acting as agent  
849 for Alabama Power Company, Georgia Power Company, Gulf Power  
850 Company, Mississippi Power Company and Savannah Electric and Power  
851 Company. Paragraph 11 of that order specifically states, in part:

852 Southern Companies state that income earned on pension assets in  
853 their external trust was credited back to customers as non-cash  
854 reductions to Account No. 926, Employee Pension and Benefits.  
855 Further, Southern Companies assert that, as a reduction to an  
856 expense account, that amount reduced Southern Companies' cost  
857 of service to all customers, including tariff customers, by over \$1  
858 billion since 1987. ...

859

860 **Q. IN THAT CASE, DID FERC ALSO INCLUDE THE NET PREPAID**

861 **PENSION ASSET AS A COMPONENT OF RATE BASE?**

862 A. Only a portion of the net prepaid pension asset was allowed for inclusion  
863 in rates, with FERC excluding over two-thirds of the amount of prepaid  
864 pension asset that Southern Company, Inc. sought to include in rate base.  
865 Southern Company's OATT rates were converted to comprehensive  
866 formula rates effective May 1, 2003 as a result of a settlement. Beginning  
867 on May 1, 2003, the amount of positive or negative pension expense  
868 included in the OATT rate was trued-up annually to the actual expense for  
869 that year. FERC specifically found in paragraph 24 of its order that it was  
870 "...not just and reasonable for Southern Companies to include any  
871 amounts related to prepaid pension accumulated prior to May 2003 in rate  
872 base under Southern Companies' OATT." Thus, only the portion of the  
873 net prepaid pension asset that accumulated during the time that the  
874 amount of positive or negative pension expense included in base rates

875 was trued-up annually to equal the amount recorded to expense was  
876 allowed to be included as a component of rate base.

877 **Q. DOES MR. FELSENTHAL DISCUSS WHAT A PREPAID PENSION**  
878 **ASSET IS?**

879 A. Yes. At lines 273 – 276 of his rebuttal testimony, Mr. Felsenthal describes  
880 the prepaid pension asset as follows:

881 The prepaid pension asset is the difference between (1) cumulative  
882 pension amounts expensed for GAAP (and included as a component  
883 of test year expenses) and (2) contributions to the pension trust. To  
884 the extent that cumulative contributions are in excess of GAAP  
885 pension expense, a prepaid pension asset will exist.  
886

887 **Q. DO YOU AGREE WITH THIS DESCRIPTION OF WHAT A PREPAID**  
888 **PENSION ASSET IS?**

889 A. Yes, with the exception of his inclusion of the phrase “and included as a  
890 component of test year expenses.” The determination of the amount of  
891 prepaid pension asset (or accrued pension liability) is based on the  
892 amount charged to expense for book purposes under Generally Accepted  
893 Accounting Principles (GAAP), not on the amount included in test year  
894 expenses in any given rate case proceeding.

895 The total cumulative amount of cash contributions to the pension  
896 plan should equal the total cumulative amount of pension expense  
897 recorded on the Company’s books over the life of the plan. During the life  
898 of the plan, either a prepaid pension asset or an accrued pension liability  
899 could result in any given year. The amount of prepaid pension asset  
900 would be the amount by which the total cash contributions that have been

901 made to the pension plan exceed the cumulative total of the amount of  
902 pension expense that has been booked by the Company. However, in  
903 any periods for which the cumulative total of pension expense booked by  
904 the Company exceeded the cumulative amount of cash contributions  
905 made to the pension plan, the result would be an accrued pension liability.

906 **Q. REPEATEDLY THROUGHOUT HIS TESTIMONY, MR. FELSENTHAL**  
907 **STATES THAT THE PREPAID PENSION ASSET WAS FUNDED BY**  
908 **INVESTORS.<sup>18</sup> DO YOU AGREE WITH THIS ASSERTION?**

909 A. No, not entirely. As indicated above, the prepaid pension asset is the  
910 difference between the cumulative amount of cash contributions to the  
911 pension plan and the cumulative amount of pension expense recorded on  
912 the Company's books under GAAP. DEU Exhibit 3.02 identified the  
913 prepaid pension asset as \$112.5 million in the 2018 Base Year in this  
914 case.

915 Clearly the \$75 million contributed to Questar Corporation's  
916 defined-benefit pension plan by Dominion Energy, Inc., as a Dominion  
917 Energy, Inc. shareholders' cost, under merger commitment 11 in Docket  
918 No. 16-057-01 contributed to the \$112.5 million prepaid pension asset.  
919 However, the \$112.5 million balance as of the Base Year is the  
920 culmination of the difference between the total cash contributions to the  
921 pension plan and the GAAP pension expense over the entire life of the

---

<sup>18</sup> DEU Exhibit 6.0R (Rebuttal Testimony of Alan Felsenthal) at lines 87-88, 160-168, 173, 208, 346-348, 376-380, 389-393, and 577-578.

922 pension plan. The degree to which that difference was funded by  
923 shareholders or ratepayers is not known.

924 **Q. PLEASE EXPLAIN.**

925 A. The amount of pension expense included in rates charged to DEU's  
926 ratepayers is not trued-up on an annual basis. Rates are not reset  
927 annually for DEU and there is no mechanism to defer or true-up the  
928 amount of pension expense incorporated in rates to the amount of pension  
929 expense booked by the Company each year under GAAP. Thus, it cannot  
930 be determined that the prepaid pension asset was funded by shareholders  
931 in its entirety. If the amount recovered from ratepayers had been trued-up  
932 annually over the entire life of the pension plan to date, then DEU could  
933 affirmatively demonstrate that the \$112.5 million prepaid pension asset  
934 had been funded by investors of the Company and by Dominion Energy,  
935 Inc. shareholders when making the contribution agreed to under merger  
936 commitment 11. This is not the case.

937 As previously pointed out in this testimony, FERC allowed only the  
938 portion of a prepaid pension asset that accumulated over the period in  
939 which the amount of pension expense included in rates was trued-up  
940 annually to the amount of booked pension expense in rate base in FERC  
941 Docket 08-129-000.

942 **Q. IN HIS REBUTTAL TESTIMONY, AT LINES 352 – 380, MR.**  
943 **FELSENTHAL PROVIDES “A SIMPLIFIED EXAMPLE” THAT HE**  
944 **CONTENDS DEMONSTRATES THAT THE PREPAID PENSION ASSET**

945 **IS FUNDED ENTIRELY BY INVESTORS. DOES HIS “SIMPLIFIED**  
946 **EXAMPLE” PROVE HIS ASSERTION?**

947 A. No, it does not. He indicates that the \$100 of GAAP pension expense in  
948 his example has been included in revenue requirements for ratemaking  
949 purposes at lines 364 – 365 of his rebuttal testimony. His example has  
950 one assume that the amount of pension expense being included in  
951 revenue requirements for ratemaking purposes equals the amount of  
952 pension expense recorded by the Company on its books. This is not a  
953 valid assumption.

954 **Q. IN RECENT YEARS, HOW HAS THE AMOUNT OF PENSION EXPENSE**  
955 **RECORDED ON THE COMPANY’S BOOKS COMPARED TO THE**  
956 **AMOUNT INCORPORATED IN BASE RATES CHARGED TO**  
957 **CUSTOMERS?**

958 A. At lines 175 – 177 of his rebuttal testimony, Mr. Felsenthal states that the  
959 Commission approved \$8.18 million of pension expense in the last rate  
960 case, Docket No. 13-057-05. DEU provided the pension expense booked  
961 in 2014 through 2018 and the budgeted amount for 2019 in DEU Exhibit  
962 3.11. The table below provides a comparison of the amount of pension  
963 expense Mr. Felsenthal indicates was included in rates from the last rate  
964 case to the actual amount of pension expense for DEU.

	Pension Expense included in Rates	Actual Booked Pension Expense	Difference
2014	\$ 8,180,000	\$ 4,685,000	\$ 3,495,000
2015	\$ 8,180,000	\$ 5,471,000	\$ 2,709,000
2016	\$ 8,180,000	\$ 3,315,000	\$ 4,865,000
2017	\$ 8,180,000	\$ (3,497,000)	\$ 11,677,000
2018	\$ 8,180,000	\$ (2,929,000)	\$ 11,109,000
2019 Forecast	\$ 8,180,000	\$ (4,614,000)	\$ 12,794,000
Total Cumulative Difference - 2014 to 2019			\$ 46,649,000

978

979

980

As shown in the above table, from 2014 through 2019, the amount of pension expense included in base rates has exceeded the actual amount of booked pension expense (and budgeted amount for 2019) by approximately \$46.6 million.<sup>19</sup>

**Q. IS THE COMPANY ABLE TO PROVIDE THE INFORMATION NEEDED TO DETERMINE THE PORTION OF THE PREPAID PENSION ASSET THAT WAS FUNDED BY INVESTORS?**

A. No. In order to determine the amount funded by investors compared to the amount funded by ratepayers, one would need to know the following amounts for each year from the inception of the plan to date: the amount of cash contributions to the pension plan, the amount of pension expense booked by the Company, and the amount of pension expense included in rates. In response to OCS data request 11.03, the Company indicated that it is “not certain which specific year the accrual method of accounting began” and that “it is assumed that it began in 1987 with the passage of

---

<sup>19</sup> Rates from Docket No. 13-057-05 took effect March 1, 2014. The cumulative amount assumes a January 1, 2014 implementation date.

981 SFAS 87.” In response to OCS data request 11.04, the Company stated  
982 that “it is unclear when the Company first included pension costs in rates  
983 in its filing based on the accrual method of accounting in Utah.” When  
984 asked in OCS Data Request 11.05 for the amount of cash contributions to  
985 the pension plan assets and the amount of booked pension expense for  
986 each year from inception of the accrual basis of accounting to date, the  
987 Company objected to the question. It did provide information for the  
988 period 1998 through 2019, but not information from the inception of the  
989 plan. When asked in OCS Data Request 11.06 for the amount of pension  
990 expense requested in rates and the amount included in rates from  
991 implementation of accrual accounting to date, the Company objected and  
992 was only able to provide amounts from 2008 forward. Thus, it is not  
993 possible to determine the portion of the net prepaid pension asset that  
994 was funded by ratepayers and the portion that was funded by  
995 shareholders.

996 **Q. HAS THE COMPANY EVER RECORDED AN ACCRUED PENSION**  
997 **LIABILITY ON ITS BOOKS, AND IF SO, WAS THAT LIABILITY**  
998 **REFLECTED AS A REDUCTION TO RATE BASE IN A PAST RATE**  
999 **CASE?**

1000 A. I do not know if an accrued pension liability has been recorded previously  
1001 by DEU. However, if an accrued pension liability previously existed on the  
1002 Company’s books, it was not reflected as an offset to reduce rate base.  
1003 OCS Data Request 11.17 asked the Company to provide for each year,

1004 from the date the accrual basis of accounting was implemented for  
1005 pension costs to date, the amount of prepaid pension asset or accrued  
1006 pension liability on the Company's books as of December 31<sup>st</sup> of each  
1007 respective year. The response merely referenced OCS Data Request  
1008 11.05, which did not provide the requested information. Thus, the  
1009 information needed to respond to this question was not provided by DEU.  
1010 The response to OCS Data Request 11.21 does show that there was an  
1011 accrued liability for post-retirement benefits other than pensions on DEU's  
1012 books during the base year and projected for the test year in this case.

1013 **Q. DEU CONTINUES TO RECOMMEND EXCLUSION OF THE NEGATIVE**  
1014 **PENSION EXPENSE FROM REVENUE REQUIREMENTS IN THIS**  
1015 **CASE. WHAT ALTERNATIVE DOES MR. FELSENTHAL PROVIDE TO**  
1016 **THIS PRIMARY POSITION?**

1017 A. Mr. Felsenthal presents inclusion of both the negative pension expense in  
1018 cost of service and the prepaid pension asset in rate base as an  
1019 alternative so that investors would "receive a fair return on their funds" if  
1020 the negative pension expense is included.<sup>20</sup>

1021 **Q. DO YOU AGREE THAT INCLUSION OF THE NEGATIVE PENSION**  
1022 **EXPENSE WITH INCLUSION OF THE PREPAID PENSION ASSET IN**  
1023 **RATE BASE IS REASONABLE AND APPROPRIATE?**

1024 A. As addressed in my direct testimony, the negative pension expense  
1025 should be included in determining the revenue requirements of DEU.

---

<sup>20</sup> DEU Exhibit 6.0R (Rebuttal Testimony of Alan Felsenthal), lines 573 – 578.

1026            However, I do not agree that the prepaid pension asset should be included  
1027            as a component of rate base. The Company is unable to demonstrate that  
1028            the entire \$112.5 million balance was funded by its investors, and the  
1029            historic information does not exist to determine the portion funded by  
1030            ratepayers instead of shareholders. Additionally, it is my opinion that it  
1031            would be grossly unfair to ratepayers to require them to pay a return on  
1032            any portion of the prepaid pension asset that is caused by the \$75 million  
1033            contribution by Dominion Energy, Inc. shareholders under merger  
1034            commitment 11, which was touted as a merger benefit to ratepayers.

1035    **Q.    WHY IS IT YOUR OPINION THAT THIS WOULD BE GROSSLY UNFAIR**  
1036    **TO RATEPAYERS?**

1037    A.    As addressed in my direct testimony, the testimony filed by the Joint  
1038           Applicants in the merger proceeding, Docket No. 16-057-01, presented  
1039           the \$75 million contribution by Dominion Energy, Inc.'s shareholders as  
1040           resulting in a benefit to ratepayers that would result in a reduction to  
1041           pension expense. In explaining how the pension contribution would  
1042           provide quantifiable benefits to customers, the Joint Applicants' calculation  
1043           did not include a return on the contribution as an offset to the pension  
1044           expense reduction caused by the contribution. It would be unfair to  
1045           ratepayers to remove these asserted benefits through the removal of the  
1046           negative pension expense in this case. It would be even more unfair to  
1047           include the impacts of that voluntary contribution to the pension fund by

1048 Dominion Energy, Inc.'s shareholders in rate base through inclusion of the  
1049 impact of that contribution on the prepaid pension asset.

1050 **Q. IN HIS REBUTTAL TESTIMONY, MR. FELSENTHAL QUANTIFIES THE**  
1051 **BENEFIT THAT CUSTOMERS RECEIVE BY THE PREPAID PENSION**  
1052 **ASSET, STATING THAT IF BOTH THE NEGATIVE PENSION EXPENSE**  
1053 **IS INCLUDED IN COST OF SERVICE AND THE PREPAID PENSION**  
1054 **ASSET IS INCLUDED IN RATE BASE, "CUSTOMERS WILL RECEIVE**  
1055 **A NET BENEFIT OF \$1.1 MILLION."<sup>21</sup> IS THIS ACCURATE?**

1056 A. No, it is not. When quantifying the purported net benefit at lines 540 – 563  
1057 of his rebuttal testimony, Mr. Felsenthal indicates that applying an  
1058 expected return of 8.75% to the prepaid pension asset of \$112.5 million  
1059 would result in a \$9.8 million reduction to pension costs. He then  
1060 compares that \$9.8 million reduction to pension costs to the \$8.7 million  
1061 impact on revenue requirement that would result from including the net  
1062 prepaid pension asset in rate base, resulting in his purported \$1.1 million  
1063 net benefit. However, not all of the pension costs are included in pension  
1064 expense. A substantial portion of the pension costs are capitalized and  
1065 not charged to expense.

1066 In DEU's filing, 54% of the forecasted 2020 test year pension costs  
1067 are anticipated to impact expenses. Thus, of the \$9.8 million reduction to  
1068 pension costs asserted by Mr. Felsenthal as resulting from the \$112.5M of  
1069 prepaid pension asset, only \$5.3 million (\$9.8M x 54%) would impact

<sup>21</sup> *Id.* at lines 540 – 563.

1070 pension expense. If the \$5.3 million reduction to pension expense is  
1071 considered, the purported net benefit presented in Mr. Felsenthal's  
1072 calculations would become a net detriment of \$3.4 million.<sup>22</sup>

1073 **Q. DOES THIS COMPLETE YOUR PREFILED SURREBUTTAL**  
1074 **TESTIMONY?**

1075 A. Yes.

---

<sup>22</sup> Calculated as \$5.4 million - \$8.7 million.
