NOTICE TO PROCEED

On February 28, 2023, the Bureau of Land Management (BLM), Moab Field Office, received Dominion Energy's request related to Temporary Use Permit (TUP) UTU-93275-02 for an exemption of Stipulation 18 which states that no surface disturbance will be conducted from December 1 through May 31 in saline soils in the Mancos Shale.

Dominion Energy has provided information demonstrating that planned construction activities support the anticipated types and levels of use appropriate for saline soils. Dominion Energy has implemented a fugitive dust and storm water management plan and construction will be discontinued if soil conditions become excessively wet or dry. Based on this information, it is appropriate to issue an exemption for the timing restrictions for saline soils in the Mancos Shale. **Dominion Energy may proceed with construction.**

If you have any questions regarding this Notice to Proceed, please contact Lisa Wilkolak, Realty Specialist, at (435) 259-2122 or lwilkolak@blm.gov.

Sincerely,

Dave Pals
Field Manager

**DOMINION ENERGY UTAH FL141 GREEN RIVER HP PIPELINE PROJECT
ADDRESSING ITEM IN TEMPORARY USE PERMIT UTU-93275-02 STIPULATIONS**

Ms. Wilkolak:

First, I would like to thank you for your efforts in assisting us through the review, processing of the numerous project documents and all your time in addressing our questions and comments throughout this process. It has been our pleasure to work with you and your staff.

Also, thank you for providing us with a copy of the draft Temporary Use Permit UTU-93275-02. We have reviewed the stipulations and have one item that we would like to address.

- Stipulation #18 states that no surface disturbance will be conducted from December 1 through May 31 in saline soils. DEU will monitor soil conditions throughout the project and has implemented a fugitive dust and storm water management plan. If soil conditions become excessively wet or dry, work will be discontinued until better weather conditions prevail. However, we request that when soil conditions are optimal - work can be allowed prior to May 31 of 2023 to prevent delays. Delays in the project schedule will likely result in greater impacts to wildlife and extend the period in which surface restoration is completed. Therefore, we request a waiver from the December 1 through May 31 work restriction in saline soils. DEU will likely be working in saline soils no earlier than April.

Thank you in advance for considering these minor modifications. If you would like to discuss further or have any questions, please call me any time.

Sincerely,

A handwritten signature in black ink, appearing to read 'R Scott Messersmith'.
