How much would natural gas service cost?

The Utah State Legislature passed a bill in 2018 that allows most of the infrastructure costs, including the line and meter to each home or business, to be paid by all Enbridge Gas Utah customers. However, each customer will be responsible for costs for any required changes to fuel lines or appliances within the home or business. Such costs might include those associated with contractor fees, adjusting appliances, or city clearances.

Would you need to buy new appliances?

In many cases, appliances can be converted from propane to natural gas. The costs of converting an appliance is the responsibility of the customer. Conversion and proper adjustment of appliances should be performed by a qualified contractor. If a propane appliance cannot be converted, a new appliance will be required.
