Subject: Questar Gas

As I work outside of Salt Lake City and am not able to attend PSC meetings, I am taking this opportunity to voice my opinion on a matter before the PCS. Why should the PCS allow Questar or any utility to silent private public opinion when it comes to how they operate here in Utah. Most of the utilities operate with near monopoly power. If rate increases are justified, why would they object to the public's input on these requests?

Power corrupts and absolute power corrupts absolutely. The utilities should not shy away from proving to the public that what they are asking for is fair and equitable. And the reason I say utilities is because if Questar is granted this request, all other regulated utilities will ask for the same treatment.
