Subject: ROCKY MOUNTAIN POWER

Utah Division of Public Utilities

P. O. Box 146751

Salt Lake City, Utah 84114-6751

NET METERING

Rocky Mountain Power charges all of its customers a retail price of 100% .

Rocky Mountain Power only pays customers producing power 50% of retail price.

In contrast all three Utility Company's in Southern Utah are paying their customers. 100% for the power they produce.

These three Utility Companies,

St. George City,

Hurricane City,

Washington City,

provide a one for one feed back with a check for unused power at the end of the calendar year.

If a customer does not use all of its credit by the end of the fiscal year Rocky Mountain Power confiscates the remaining power and starts all over again.

To my way of thinking this is theft on a grand scale.

May I suggest that the Public Service Commission require Rocky Mountain Power to follow suit, in that their customers are not able to connect to opposing utilities and take advantage of the better rate of power. A privilege that the Public Service Commission has extended to Rocky Mountain Power.

Now in Rocky Mountain's new proposal they are getting extremely greedy. They are asking to be the governing body. The Public Service Commission has already granted Rocky Mountain a MONOPOLY. I don't see why you should leave the public completely afloat and entirely without representation.

If that isn't enough, talking about being greedy, Rocky Mountain Power is now asking to change the annualized billing period from a calendar period to a fiscal period of April 1st to March 31st with an end result that most power producing customers will experience an even greater loss.

Also please keep in mind. I expended \$45,000.00 dollars to install the power grid.

I believe I should be allowed to use all the power I generate, and be reimbursed at the rate of 100% for any excess.

Please take into consideration these suggestions and act accordingly.

Sincerely

Vinton W. Parker
