

July 3, 2018

Dear Property Owner,

As part of Rocky Mountain Power's commitment to provide safe, reliable and efficient energy to our customers, we're planning a transmission upgrade project to provide additional capacity, improve electric service reliability and meet power requirements for your area.

Demand for electricity in the South Valley area of Salt Lake County has exceeded the capacity of some of the electric power facilities and needs to be rebuilt. The South Valley area energy load has grown 1.5 percent per year over the last five years and state projections put Salt Lake County's population at approximately 1.7 million people by 2040 — an increase of nearly 70 percent over 2010.

This project will improve service for existing customers and provide capacity to serve current and future demand for electricity in this area.

In an effort to communicate project details and inform the community, we would like to invite you and your neighbors to an open house to find out more about the project. The open house will be held as follows:

**What: Public Open House**  
**When: Monday, July 16, 2018**  
**6:30 p.m. – 8:30 p.m.**  
**Where: The Pavilion at City Park**  
**11000 S. Redwood Road**  
**South Jordan, UT 84095**

Rocky Mountain Power representatives will be available at the open house to explain details about the project. The transmission line will be rebuilt from approximately 10700 South and 1400 West following the existing line until it crosses the Jordan River at approximately 11800 South.

We look forward to meeting with you to provide project details and answer questions.

Sincerely,

Lisa Romney  
Regional Business Manager, Rocky Mountain Power
