Good morning Utah Colleagues,

We wanted to inform you that yesterday, during the Federal Energy Regulatory Commission's May 19 open meeting, the Commission authorized a certificate for Kern River Gas Transmission Company to construct the Delta Lateral Project in Millard County, Utah.

The order is available here: <https://www.ferc.gov/media/c-1-cp21-197-000>

Briefly, the order approves Kern River's application for a certificate to construct and operate a 35.84-mile-long, 24-inch-diameter pipeline and related facilities in Millard County, Utah, for the proposed Delta Lateral Project. The project will provide up to 140,000 dekatherms of gas per day of firm transportation service from Kern River's existing mainline in Opal, Wyoming, to a new delivery point serving Intermountain Power Agency's project to convert an existing coal-fired electric power plant to a natural gas-fired combined cycle power plant.

Please let me know if you have any questions about this or any other Commission matter.

Thank you.

Rob
