REDACTED – REBUTTAL TESTIMONY

Subject to R 746-100-16

October 30, 2012

TABLE OF CONTENTS – BION C. OSTRANDER

<u>Description</u>	<u>Page</u>
Introduction	1
Purpose of Rebuttal Testimony	1
Difference in Starting Points for OCS and DPU Adjustments	2
Summary of Payroll Issues Where OCS and DPU Disagree and Agree	3
Impact of Ms. Carter's Compensation Study on DPU's Payroll Adjustment	7
Ms. Carter's Analysis Has Some of the Same Flaws as Manti's Compensation Practices	8
Ms. Carter's Margin of Error Not Removed from DPU Payroll Adjustment	9
DPU's Proposed Payroll Increases Open the Door for Repeat Problems with Manti	11
Ms. Carter's Analysis Does Not Adequately Compare Manti Job Positions to Market	14
Ms. Carter's Compensation Study (and Studies in General) are Highly Subjective	16
Ms. Carter and DPU Do Not Address "Competency Issue"	18
DPU's Payroll Adjustment Inadvertently Allocates All Increases to Expense	20
OCS Adopts DPU's Rate of Return	21
Summary of OCS Position	21

1

INTRODUCTION2 **Q. WHAT IS YOUR NAME AND BUSINESS ADDRESS?**3 A. My name is Bion C. Ostrander. My business address is 1121 S.W.
4 Chetopa Trail, Topeka, Kansas 66615-1408.

5

6 **Q. ARE YOU FILING REBUTTAL TESTIMONY ON BEHALF OF THE UTAH**
7 **OFFICE OF CONSUMER SERVICES (“OCS”)?**8 A. Yes. I previously filed direct testimony and I am now filing rebuttal
9 testimony on behalf of OCS regarding the revenue requirements of Manti
10 Telephone Company (“Company”, “Manti” or “MTC”) related to its second
11 amended application for increased Utah Universal Service Funds
12 (“UUSF”).

13

14 **Q. WHAT IS THE PURPOSE OF YOUR REBUTTAL TESTIMONY?**15 A. First, I will briefly address the difference in test periods and adjustment
16 approaches used by OCS and the Utah Division of Public Utilities (“DPU”).
17 Second, I will primarily focus on Ms. Jill Carter’s testimony that addresses
18 her compensation study that in turn provides the foundation for Mr. Robert
19 A. Davis’ adjustment to significantly increase Manti’s payroll costs to
20 purported market levels. I will also address concerns with some of the
21 calculations used in Mr. Davis’ payroll adjustment that is linked to Ms.
22 Carter’s compensation study. Third the OCS proposed rate-of-return

Confidential

23 (“ROR”) of 8.01% is essentially the same as DPU’s proposed ROR of
24 8.16%, therefore the OCS is willing to adopt DPU’s 8.16% ROR. Finally,
25 the issues addressed in this rebuttal testimony are not intended to
26 represent all differences of opinion with DPU regarding matters in this
27 proceeding. However, despite OCS and DPU using different
28 methodologies for various adjustments, both parties share many common
29 concerns and arrive at similar positions regarding a final recommendation.

30

31 **Q. DO YOU HAVE EXHIBITS SUPPORTING YOUR TESTIMONY?**

32 A. Yes. OCS Exhibit 2.1R Ostrander is attached to this testimony.

33

34 **Q. CAN YOU BRIEFLY EXPLAIN THE DIFFERENCE IN THE STARTING**
35 **POINT FOR OCS ADJUSTMENTS VERSUS DPU ADJUSTMENTS, AND**
36 **DO THESE APPROACHES EVENTUALLY REACH A SIMILAR**
37 **BOTTOM LINE?**

38 A. Manti started with a forecasted test period that essentially doubled the
39 operating expenses for the last six months of 2011 (July to December
40 2011), and then proposed adjustments to those amounts. It appears that
41 DPU started with Manti’s proposed forecasted test period amounts for
42 their adjustments, but then in many cases they initially reversed (removed)
43 Manti’s proposed adjustment and then substituted their own adjustment.

44

45 OCS technically started with Manti's forecasted test period but Adjustment
46 BCO-1 reversed and removed the impact of both: a) Manti's forecasted
47 test period; and b) all Manti proposed adjustments - - to arrive at a starting
48 point of a December 31, 2011, test period. Therefore, OCS removed all of
49 the Manti proposed adjustments up front in one adjustment and DPU
50 removed many of Manti's proposed adjustments as part of each specific
51 adjustment that they propose. In the end, the OCS and DPU final
52 recommended revenue surplus positions are not that far apart, each party
53 just used a different starting point for adjustments. Therefore, the starting
54 point of a test period is not that important in this case, it is the final
55 adjusted amounts that are most important.

56

57 **Q. WILL YOU SUMMARIZE THOSE PAYROLL ISSUES WHERE OCS AND**
58 **DPU APPEAR TO DISAGREE AND AGREE?**

59 A. Yes. OCS disagrees primarily with the largest component of DPU's
60 proposed increase in Manti payroll costs that is based on Ms. Carter's
61 underlying compensation study and analysis. It appears that Ms. Carter
62 addresses the underlying compensation study and policy testimony
63 supporting this overall payroll increase and Mr. Davis reflects the actual
64 related payroll adjustment impact in the revenue requirements.¹ DPU first
65 removed Manti's significant payroll adjustment (which Manti asserts is

¹ Mr. Davis Direct Testimony, lines 171 to 213, with related payroll salaries, wages and taxes adjustment at DPU Exhibit 4.4 REV-EXP and related payroll health/dental benefits at DPU Exhibit 4.5 REV-EXP

66 based on adjusting its payroll to market levels). But then DPU
67 implemented a smaller, but still significant, increase in payroll costs based
68 on Ms. Carter's approach to adjust Manti payroll costs to median market
69 levels.²

70

71 In summary, the payroll cost issues where OCS disagrees with DPU
72 include:

73 1) The DPU's proposed payroll increase based upon Ms. Carter's
74 compensation study should be rejected for the following reasons:

75

76 a) Although Ms. Carter criticizes Manti's compensation policy as
77 being unusual and favoring above market pay for higher level
78 positions compared to lower positions, her recommendations
79 incorporate this same flaw by rewarding some higher level
80 positions with significant pay increases.

81

82 b) DPU's payroll adjustment is not consistent with Ms. Carter's
83 recommendation that any of Manti's base salary and wages
84 within a 10% margin of error of the market are reasonable, and
85 instead DPU adjusted payroll for the entire market difference - -
86 including the 10% margin of error.

87

88 c) DPU's proposed pay increase could repeat the problems of the
89 past, whereby DPU agreed to provide Manti with an allowance
90 of UUSF to **[BEGIN CONFIDENTIAL]**

91

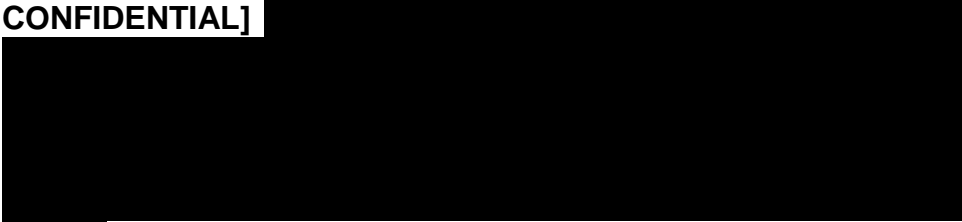

92 **[END CONFIDENTIAL].**

93

94 d) Ms. Carter's analysis cannot adequately match market job
95 positions and salaries with those of Manti, because the actual
96 job description and total salaries paid to common officers and
97 employees of both Manti and its affiliates is not known and has
98 not been provided by Manti or MTCC.

99

² Ms. Carter recommends some increases and some decreases in salaries and wages for individual Manti personnel, but the overall impact is a net increase in payroll costs.

- 100 e) The assumptions underlying compensation studies are highly
101 subjective and result in broad and significant differences in both
102 amounts and opinions regarding proper "market" payroll levels.
103
- 104 f) DPU's adjustment fails to address the "competent personnel"
105 issue raised by Ms. Carter, and substantial payroll increases
106 can unduly reward Manti management for the history of issues
107 and problems stemming from the 2008 review through today.
108
- 109 2) I disagree with Ms. Carter's approach to cost of living ("COLA")
110 increases. Ms. Carter rejects Manti's proposed [BEGIN
111 CONFIDENTIAL] 
112
113
114
115
116
117 [END CONFIDENTIAL] In contrast, I have included a
118 separate [BEGIN CONFIDENTIAL]  [END CONFIDENTIAL]
119 COLA adjustment for Manti "non-management" wage employees
120 only, and I have not awarded any pay increases to Manti
121 management employees.
122
- 123 3) It appears that DPU may have inadvertently allocated 100% of Ms.
124 Carter's payroll changes to expense, instead of allocating a proper
125 amount to capitalized payroll accounts, thus overstating the cost of
126 service. Whereas my adjustment to payroll costs correctly
127 allocates payroll costs between expense and capital amounts, as
128 reflected in my direct testimony at Confidential OCS Exhibit 2.4D
129 Ostrander.
130
- 131 4) I disagree with DPU's treatment of the projected costs of an
132 employee that has never been hired by Manti since the 2008
133 period. DPU removes these costs, but OCS allows these costs to
134 make Manti more efficient and to reduce the role and significant
135 costs of outside consultants in the future.³
136
- 137 5) There appears to be some differences between OCS and DPU
138 regarding the starting point for Manti's unadjusted salaries/wages,
139 and DPU may have included payroll for one less construction

³ This is also one reason that supports the OCS adjustment to outside professional fees.

140 worker in their analysis, but OCS is hopeful that these differences
141 can be reconciled and resolved.

142

143 Some of the primary payroll cost issues where OCS agrees with DPU
144 include:

145

146 1) DPU removes the costs of a Manti employee that no longer works
147 for Manti (but works for MTCC), and OCS agrees and has also
148 removed these costs in its payroll adjustment.

149

150 2) DPU has reflected a more precise calculation of payroll taxes and
151 health/dental benefit costs in its payroll adjustment, and I have
152 applied a more general payroll loadings factor to reflect these same
153 payroll costs. I agree with DPU's approach and will incorporate this
154 approach in future calculations.

155

156 **Q. WHAT IS THE OCS POSITION AND ADJUSTMENT ON PAYROLL**
157 **ISSUES AFTER CONSIDERING DPU'S TESTIMONY?**

158 A. I am not proposing any changes to the underlying reasons supporting my
159 payroll adjustment or to the most important calculations. However, in my
160 final revenue requirement I will revise the payroll taxes and benefits
161 portion of my payroll adjustments using Mr. Davis' more precise method
162 reflected in his related spreadsheet, instead of using my original payroll
163 loadings factor.

164

165 **Q. WILL YOU BRIEFLY EXPLAIN MS. CARTER'S COMPENSATION**
166 **STUDY THAT IS THE PRIMARY BASIS FOR DPU'S PAYROLL**
167 **ADJUSTMENT?**

168 A. Ms. Carter's compensation study is intended to compare the current
169 salaries and wages of job positions at Manti with comparable job positions

170 in the market, and then use these results to adjust Manti’s payroll costs of
 171 individual employees up or down to be in line with market levels of these
 172 comparable positions at the 50% median.

173

174 **Q. WHAT IS THE IMPACT OF MS. CARTER’S ANALYSIS ON DPU’S**
 175 **PAYROLL ADJUSTMENT?**

176 A. DPU’s total payroll adjustment is a net decrease of **[BEGIN**
 177 **CONFIDENTIAL]** [REDACTED]⁴ **[END CONFIDENTIAL]** consisting of the
 178 following increases and decreases:

- 179 1) DPU reverses and reduces Manti’s proposed payroll increase of
 180 **[BEGIN CONFIDENTIAL]** [REDACTED] **[END CONFIDENTIAL]**, thus
 181 resulting in a decrease in payroll costs.
 182
- 183 2) DPU then increases payroll costs by **[BEGIN CONFIDENTIAL]**
 184 [REDACTED]
 185 **[END CONFIDENTIAL]** for the impact of
 186 Ms. Carter’s compensation study. This adjustment also reflects the
 187 impacts of removing non-MTC employees from the payroll costs.⁵
 188
- 189 3) DPU then proposes a net reduction in health/dental insurance
 190 benefits costs of **[BEGIN CONFIDENTIAL]** [REDACTED] **[END**
 191 **CONFIDENTIAL]**.
 192

193 Mr. Davis’ testimony states that DPU’s proposed base salary payroll
 194 increase of **[BEGIN CONFIDENTIAL]** [REDACTED] **[END**

⁴ Mr. Davis exhibits, DPU Exhibit 4.4 REV-EXP for payroll salaries/wages and payroll taxes and DPU Exhibit 4.5 REV-EXP for health/dental insurance.

⁵ There is a small rounding error between this amount and the amount shown at DPU Exhibit 4.4 REV-EXP (2).

195 **CONFIDENTIAL]** is attributed to Ms. Carter's compensation study and
196 reflecting payroll at median market levels.⁶

197

198 **Q. DOES MS. CARTER CRITICIZE MANTI'S COMPENSATION**
199 **PRACTICES AND THEN PROPOSE PAYROLL INCREASES WITH**
200 **THESE SAME FLAWS?**

201 A. Yes. Ms. Carter concludes that most of the higher level positions are paid
202 at levels above market and the lower level positions are paid at levels
203 below market, and she states that this is unusual and suggests that higher
204 level positions have been favored over lower level positions in terms of
205 payroll and this is "not in accordance with usual and customary standards
206 of compensation."⁷ It appears that Manti's existing payroll practices are a
207 significant concern to Ms. Carter.

208

209 Despite this criticism of Manti's compensation practices, Ms. Carter's
210 compensation study continues this unusual and irregular practice by
211 rewarding two of the four highest paid management employees with
212 payroll increases of **[BEGIN CONFIDENTIAL] [REDACTED] [END**
213 **CONFIDENTIAL]**. Thus it appears Ms. Carter's compensation study has
214 some of the same flaws that she alleges of Manti's payroll practices.

⁶ Mr. Davis Direct Testimony – p. 10, line 180, and p. 11, line 181.

⁷ Ms. Carter's Direct Testimony – p. 11, lines 231 to 235, p. 12, lines 236 to 241.

215

216 Ms. Carter's recommendations results in a DPU adjustment that increases

217 Manti employee payroll costs by **[BEGIN CONFIDENTIAL]** [REDACTED]

218 [REDACTED]

219 [REDACTED]

220 [REDACTED]

221 [REDACTED]

222 [REDACTED]

223 [REDACTED] **[END CONFIDENTIAL]**.

224

225 **Q. CAN YOU EXPLAIN THE CONCEPT OF "ACCEPTABLE MARKET**

226 **RANGE" ADDRESSED IN MS. CARTER'S COMPENSATION STUDY?**

227 A. Some compensation consultants establish an acceptable market range

228 (also called a margin of error) to allow for the imprecision and subjectivity

229 in underlying market survey data, and to account for issues that may be

230 difficult to precisely quantify such as geographic differences in pay across

231 the country, inflation factors used in an attempt to true-up payroll costs in

232 historic surveys to current levels, along with other subjective factors.

233 Some compensation consultants use a margin of error range of 10% to

234 15%, and if the actual payroll for a specific job position is within an

235 acceptable market range (or margin of error) that is either 10% to 15%

236 above or below market, then no revisions or changes are necessary for

237 that job position.

238

239 Ms. Carter recommends a 10% margin of error in this case. But as
240 another example, a 15% margin of error was proposed by compensation
241 consultant Mr. Christopher McGee (Partner with Mercer Human Resource
242 Consulting) in his testimony on behalf of a utility company in a 2011
243 Maryland rate case.⁸ The bottom line is that these margins of error are
244 just another subjective factor used in compensation studies, and Ms.
245 Carter has not included any documentation to show how she determined a
246 10% margin of error.

247

248 **Q. DOES THE DPU'S PAYROLL ADJUSTMENT FAIL TO CONSIDER MS.**
249 **CARTER'S RECOMMENDED 10% MARGIN OF ERROR?**

250 A. Yes, and this has overstated DPU's adjustment to increase payroll costs.
251 Ms. Carter states, "Any MTC base salary data that was +10% or -10%
252 from the market median base salary was considered to be within an
253 acceptable market range.⁹ Therefore, at the very minimum, it is not
254 reasonable to adjust or propose changes for payroll costs that fall within
255 Ms. Carter's 10% margin of error. However, DPU's payroll adjustment
256 incorrectly reflects this entire 10% margin of error.

257

⁸ Before the Public Service Commission of Maryland. *In the Matter of the Application of Washington Gas Light Company for Authority to Increase Existing Rates and Charges and to Revise its Terms and Conditions for Gas Service*, Case No. 9267. Direct Testimony of Mr. Christopher McGee, April 15, 2011, page 6, lines 18 and 19. Mr. McGee stated, "Mercer considers any job within +/- 15% to be within the competitive range.

⁹ Ms. Carter's Direct Testimony – p. 6, lines 121 to 123.

258 **Q. HOW SHOULD THIS MARGIN OF ERROR ISSUE BE TREATED IF THE**
259 **COMMISSION ADOPTS THE COMPENSATION STUDY APPROACH?**

260 A. I recommend that the Commission reject Mr. Carter's compensation study
261 for all of the apparent problems and adopt the OCS payroll adjustment.
262 However, if the Commission adopts Ms. Carter's compensation study
263 approach, then I believe the Commission should make a revision to DPU's
264 payroll adjustment regarding this margin of error issue (along with other
265 changes recommended later). Specifically, the Commission should
266 reduce DPU's payroll adjustment by the amount of at least a 10% to 15%
267 margin of error at the very minimum.

268

269 **Q. DOES DPU'S PROPOSED PAY INCREASE OPEN THE DOOR FOR**
270 **MANTI TO REPEAT PROBLEMS FROM THE PAST AND NOT USE**
271 **THESE FUNDS FOR INTENDED PURPOSES?**

272 A. Yes. DPU previously reached agreement with Manti to provide a UUSF
273 allowance of **[BEGIN CONFIDENTIAL]** [REDACTED]
274 [REDACTED] **[END CONFIDENTIAL]**. However, Manti used these UUSF
275 amounts in 2011 to pay outside consultants to perform these same
276 functions.¹⁰ Manti never did provide OCS with a detailed accounting of
277 how these UUSF amounts were actually spent. Also, Manti has refused to
278 specifically identify how much UUSF has been used to pay outside

¹⁰ Mr. Ostrander Direct Testimony – p. 29, lines 808 to 817.

279 regulatory consultants GVNW Consulting (“GVNW”), accountant Hawkins
280 Cloward & Simister LC (“Hawkins”) and attorneys Blackburn & Stoll
281 LC(“Blackburn”) for the 2008-related proceeding, cleaning up the
282 regulatory and accounting books as required by the 2011 Stipulation, and
283 used for nonregulated matters.

284

285 It does not seem prudent at this this time to reward Manti with an even
286 greater UUSF allowance of **[BEGIN CONFIDENTIAL]** ██████████ **[END**
287 **CONFIDENTIAL]** (DPU’s compensation study payroll increase) in this
288 case, given the problems as recent as 2011 with this similar type of
289 approach and given Manti’s failure to fully account for these funds after-
290 the-fact.

291

292 If Manti is given a significant UUSF allowance for adjusting payroll to
293 market median levels, there are no assurances Manti will use it for these
294 purposes (although there would also be some problems with how to
295 administer payroll reductions for certain employees). In fact, the use of
296 Ms. Carter’s compensation study approach can have a compounding
297 negative impact over time that allows for significant manipulation of UUSF
298 amounts.

299

300 First, let us assume for illustration purposes that Manti is given an
301 additional \$100,000 in UUSF in this case to reflect its payroll at market

Confidential

302 levels. Second, let us assume that Manti does not use this \$100,000 for
303 payroll changes, but instead uses this for other purposes. Third, let us
304 assume that a year from now Manti files another case for increased UUSF
305 and that Ms. Carter's compensation study reaches a similar conclusion
306 that Manti still needs a \$100,000 allowance to bring its payroll to market
307 levels, because Manti never used the \$100,000 from the previous case to
308 implement pay changes. It would appear that the use of compensation
309 studies will continue to unjustly reward Manti year-over-year with
310 additional revenue requirement allowance amounts that are not being
311 used by Manti (or at least not used as intended) and should therefore not
312 be included as a continued part of the cost of service in revenue
313 requirement calculations.

314

315 Finally, and most importantly, OCS has significant concerns that any
316 allowance for market level pay increases will continue to be improperly
317 diverted to nonregulated operations (either directly or indirectly) as we
318 have already determined in this case. OCS does not believe that
319 rewarding Manti with allowance for UUSF funds related to compensation
320 study based market pay levels is a prudent decision at this time based on
321 the problems addressed in this proceeding.

322

323 **Q. DOES MS. CARTER'S COMPENSATION STUDY ADEQUATELY**
324 **COMPARE MANTI'S JOB POSITIONS (AND ACTUAL SALARIES)**

Confidential

325 **WITH MARKET JOB POSITIONS (AND RELATED MARKET**
326 **SALARIES)?**

327 A. No, I don't believe this can be done under the current circumstances. One
328 of the fundamental and most important starting points of a compensation
329 study is to be able to properly compare a company's specific job position
330 (and related actual salaries paid) to the same type of benchmark job
331 positions in the market (and related market salaries paid) from appropriate
332 surveys. I don't believe Ms. Carter's compensation study can accurately
333 achieve this proper comparison between Manti's job positions and those in
334 the market, although she probably made her best effort in this regard.

335

336 First, Ms. Carter's testimony explains the limitations and restrictions
337 placed on her by Manti in regards to interviewing employees regarding
338 their job descriptions and other matters, and she only interviewed
339 personnel that were permitted by Manti, her interview process was cut
340 short by one-half day, and the Manti attorney was in the room the entire
341 time and this could have inhibited clear and accurate responses by
342 personnel.¹¹

343

344 Second, some of the job descriptions attached to Ms. Carter's testimony
345 are not accurate in my opinion, although I do not fault Ms. Carter for

¹¹ Mr. Carter's Direct Testimony – page 4, lines 68 to 72.

346 Manti's failure to fully disclose job responsibilities. For example, Mr.
347 Dallas Cox (Assistant General Manager/Plant Engineer for Manti) is
348 identified as a full-time employee of Manti and his job description does not
349 mention any duties or responsibilities for MTCC. However, just by the
350 general description of his duties for Manti, it is clear that these same
351 responsibilities related to **[BEGIN CONFIDENTIAL]** [REDACTED]
352 [REDACTED]
353 [REDACTED] **[END CONFIDENTIAL]** with fiber to the home
354 ("FTTH") plant that is also clearly beneficial to MTCC (Mr. Dallas Cox is
355 also President of MTCC). Therefore, without accurate and complete job
356 descriptions for all employees, this can impact the results of the
357 compensation study.

358

359 Third, as I explained in my direct testimony, Manti has not provided the
360 amount of payroll that is paid to common officers and employees of Manti
361 and MTCC, and Manti has not properly allocated related payroll costs
362 between Manti and MTCC.¹² Manti failed to provide payroll costs paid by
363 MTCC to common officers and employees of Manti and MTCC in OCS DR
364 2-29 and 2-30. If only the Manti portion of payroll costs for common
365 officers and employees of Manti and MTCC is included in the
366 compensation study, this can make it appear that Manti employee

¹² Mr. Ostrander Direct Testimony – page 39, line 1067, to page 44, line 1180.

367 compensation is below the market because not all compensation for both
368 Manti and MTCC has been properly included in the compensation study
369 for comparison purposes.

370

371 **Q. CAN YOU EXPLAIN HOW MS. CARTER'S COMPENSATION STUDY IS**
372 **HIGHLY SUBJECTIVE AND COULD RESULT IN SIGNIFICANTLY**
373 **DIFFERENT RESULTS?**

374 A. Most compensation studies have some fairly significant level of
375 subjectivity that can impact results. However, the substantial unrecorded
376 affiliate transactions between Manti and MTCC, failure to identify payroll
377 amounts for common officers and employees of Manti and MTCC, and the
378 general overall failure of Manti to provide requested documentation to
379 OCS raises additional concerns about Ms. Carter's compensation study in
380 this case.

381

382 Ms. Carter's testimony addresses concerns with certain subjective
383 assumptions that Manti incorporated into its compensation analysis,
384 including salary range length is too long, pay increases in certain salary
385 steps, pay structure based on seniority, and certain pay discrepancy
386 between two groups. Ms. Carter appears to have addressed these
387 concerns in her compensation study, but these are several examples of
388 subjective issues that can impact pay levels.

389

390 In addition, in my experience I have seen subjective issues that can
391 significantly impact the results of any compensation studies, including:

- 392 1) Selection of comparable companies – companies can be
393 subjectively selected based on one or a variety of factors such as
394 total revenues, number of customers, total assets, market value,
395 type of industry (utility specific, telecom specific, general industry),
396 and other considerations;
- 397
398 2) Geographic pay differences – market payroll can vary from region
399 to region based on economic and demographic factors and different
400 regions can produce different results;
- 401
402 3) Inflation or other growth factors used to convert “old” studies to
403 “current” studies – for example a compensation consultant may
404 take a 2008 study and attempt to convert it to a 2012 study by
405 subjectively increasing the included market payroll levels by a
406 certain percentage each year (although this annual growth rate is
407 subjective) and this can affect study results;
- 408
409 4) Utah specific, region-specific or nationwide surveys – the number of
410 survey benchmark positions used from Utah specific, region-
411 specific or nationwide surveys can influence compensation study
412 results;
- 413
414 5) Using “mean” or “median” when identifying market pay levels - the
415 use of a 25%, 50%, or 75% median (or something in-between) has
416 a substantial impact on study results;
- 417 6) Number of positions included in survey - the number of positions
418 included for comparison in a survey, and for which results are
419 applied to all other positions or employees that are “similar” to
420 these job positions; and
421
- 422 7) Selection of positions - whether the compensation consultant or the
423 company selects the positions to be included in the compensation
424 analysis can affect objectivity and the results.

425
426 With all of these highly subjective factors it is easy to understand how two
427 compensation studies can arrive at vastly different results or how an
428 inadvertent or intentional error can significantly impact study results. The

429 subjectivity in compensation studies does not easily translate to important
430 regulatory rate-making decisions regarding payroll costs.

431

432 **Q. DOES DPU ADDRESS THE “COMPETENCY” ISSUE RAISED BY MS.**
433 **CARTER’S TESTIMONY?**

434 A. No. Ms. Carter’s testimony states that bringing Manti employee base
435 salary levels to the market median “provides MTC with adequate funds to
436 staff each position with competent personnel.”¹³ The context of Ms.
437 Carter’s reference to “competent personnel” is not completely clear.

438

439 Ms. Carter and DPU Staff do not provide any assessment of “competent”
440 Manti personnel in their testimony, so this may be another step that is
441 required to be performed before Ms. Carter’s market payroll levels should
442 be adopted.

443

444 Also, Ms. Carter’s testimony appears to indicate that Manti’s
445 compensation adjustment method and practices do not adequately
446 consider merit or performance of employees and she states this is unusual
447 and is not reasonable and customary compensation practice.¹⁴ If my
448 understanding of Ms. Carter’s testimony is correct, Manti does not

¹³ Ms. Carter’s Direct Testimony, p. 13, lines 270 to 271.

¹⁴ Mr. Carter’s Direct Testimony, p. 10, lines 211 to 213, and p. 11, lines 214 to 223.

449 properly evaluate, measure, or reward employees based on merit or
450 performance. Many problems with Manti's accounting and regulatory
451 books that were first identified in 2008 are still ongoing. For example,
452 Manti does not have a fully implemented Cost Allocation Manual and has
453 appears to have failed to retain important documents related to its loan
454 with RTFC. These and other issues raise concerns about competency
455 and proper decision making. Such concerns should be considered before
456 allowing any salary increases (especially for the higher level positions in
457 Manti that are both owners and family members) because these
458 competency issues are likely not applicable for hourly wage employees.

459

460 **Q. DOES DPU'S PAYROLL ADJUSTMENT INADVERTENTLY ALLOCATE**
461 **ALL OF THE AMOUNT TO EXPENSE?**

462 A. It appears that Mr. Davis (at DPU Exhibit 4.4 REV-EXP (2)) may have
463 inadvertently allocated the entire amount of the payroll changes to
464 expense, instead of allocating part of the adjustment to capital accounts. I
465 have used Mr. Davis' exhibit as the starting point and shown revised
466 calculations at "OCS Exhibit 2.1R Ostrander" that reduces payroll expense
467 by the amount of **[BEGIN CONFIDENTIAL]** 
468 
469 **[END CONFIDENTIAL]** related to amounts that should be capitalized.¹⁵ I

¹⁵ This same type of adjustment would need to be applied to Mr. Davis' related
Confidential

470 used Mr. Davis' exhibit and entered the capitalized amounts for each
471 Manti employee from the 2011 Labor Distribution Report, and these same
472 amounts were also shown at OCS Exhibit 2.4D Ostrander, Adjustment
473 BCO-3, of my direct testimony. I then calculated the ratio of this
474 capitalized payroll to Mr. Davis' beginning payroll amounts for each Manti
475 employee. This "capitalized ratio" was then applied to the DPU proposed
476 payroll change and the result was treated as an adjustment to reduce
477 DPU's payroll expense.

478

479 There are some differences between Mr. Davis and myself regarding
480 starting salaries/wages of some Manti employees, and I was not able to
481 locate the wages of one of the construction workers in Mr. Davis' exhibit.
482 However, I am hopeful that these differences can be resolved and
483 reconciled.

484

485 **Q. DOES OCS PROPOSE TO ADOPT THE ROR OF DPU?**

486 A. Yes. There is not a significant difference between the proposed OCS
487 ROR of 8.01% and the proposed DPU ROR of 8.16%, so OCS is
488 proposing to adopt the DPU ROR.

489

490 **Q. PLEASE SUMMARIZE YOUR TESTIMONY.**

adjustment for payroll taxes and health/dental benefits expense.

Confidential

491 A. I make the following recommendations to the Commission:

492 • Although the OCS uses a different test period, the net result of our
493 methodology is not substantially different than that used by the DPU,
494 both parties share many common concerns, and both parties arrive at
495 a final revenue requirement that is very similar.
496

497 • The Commission should reject the DPU's payroll adjustments based
498 on Ms. Carter's compensation study because it rewards some Manti
499 management employees with unwarranted significant pay raises, it
500 does not account for the 10% margin of error in Ms. Carter's analysis,
501 it repeats the problems of the past whereby Manti was provided UUSF
502 funds for payroll costs of an employee that was never hired, it is not
503 possible to match market positions and salaries with comparable Manti
504 personnel due to Manti's failure to provide critical information,
505 compensation studies are problematic and highly subjective with
506 results that can vary significantly based on underlying assumptions,
507 and DPU fails to address the "competent personnel" issue raised by
508 Ms. Carter.
509

510 • It appears that DPU may have inadvertently allocated the entire
511 amount of its payroll adjustment to expense, instead of properly
512 allocating some portion to capital accounts.
513

514 • DPU has removed the cost of an employee that was never hired by
515 Manti since the 2008 period, but OCS has allowed these costs in order
516 to make Manti more efficient and to reduce the role and significant
517 costs of outside consultants in the future.
518

519 • There appears to be some differences between OCS and DPU
520 regarding the starting point for Manti's unadjusted salaries/wages, and
521 DPU may have included payroll for one less construction worker in
522 their analysis, but OCS is hopeful that these differences can be
523 reconciled and resolved.
524

525 I also indicate that the OCS intends to adopt the DPU more precise
526 calculation of payroll taxes and health/dental benefit costs and the DPU's
527 proposed ROR of 8.16%.
528

529 **Q. DOES THIS COMPLETE YOUR PREFILED REBUTTAL TESTIMONY?**

Confidential

530 A. Yes.
