

**EXHIBIT F**  
Customer Information

Mountain Sewer began operation in 1985. Mountain Sewer currently serves 127 residential customers (both single family homes and condominiums), with another 55 unconnected lots on standby.

During 2009, Mountain Sewer processed 6,170,410 gallons of wastewater (approximately 514,000 gallons per month). During 2010, Mountain Sewer processed 5,410,212 gallons of wastewater (approximately 451,000 gallons per month).

Sewer usage is not metered and all customers are billed a flat monthly rate. The current monthly rate of \$22.00 multiplied by 127 current sewer customers yields monthly revenues of \$2,794. The pro forma income statements included in Exhibit G show predicted billing for the next three years. Mountain Sewer estimates approximately one new sewer connection per year for the next three years.
